QWIK GUIDE: GEOFOAM (GEO-TECHNICAL EPS)

UNIQUE CREDENTIALS

Dyplast has over fifty years of development and manufacturing experience with its GeoFoam product line and applications. Dyplast GeoFoam is produced as a large expanded polystyrene (EPS) rigid foam block, typically used as a light-weight/high-strength structural replacement for soil in geo-technical projects or as structural alternatives in applications such as stadium seating and swimming pool foundations in hi-rise hotels. Just a few examples include:

- road & highway base
- bridge approaches
- loading docks/ramps
- airport runway bases
- rail/track foundations
- embankments
- slope stabilization
- stadium seating
- large-scale landscaping
- golf course terracing
- swimming pool foundations
- pool decks
- noise and vibration abatement
- buried pipeline base
- dams and backfill

Dyplast GeoFoam is highly moisture resistant and will not rot, mold, erode, or settle when properly designed and installed. Dyplast Geofoam additionally has excellent insulating qualities, low hydraulic conductivity, and excellent strength and deformation properties that complement natural soil behavior. Dyplast Geofoam is approximately 1% of the weight of most sandy and/or average moisture soils, and is particularly advantageous in applications where proper soil alternatives:

- are not available
- where settlement and/or erosion are of concern
- where leaching may be problematic.

UNMATCHED QUALITY/DELIVERY

Dyplast GeoFoam has been tested by independent laboratory ([RADCO Report No. RAD-4826](#)) to meet the compressive resistance requirements of ASTM D6817 "Standard Specification for Rigid, Cellular Polystyrene Geofoam". Dyplast Geofoam is available in a range of densities from 1 through 2.0 lb/ft³ to meet varied demands for structural integrity and cost effectiveness, and can be provided in blocks up to 20 feet long, 48 inches wide, and 40 inches thick to optimize the engineering/construction process.

Dyplast's high production capacities, on-hand inventories, and just-in-time deliveries generate advantages for end-users while lowering per-unit costs. Down-stream cutting and fabrication capabilities include CAD and CNC equipment that can achieve unmatched flexibility and tolerance in blocks or smaller pieces of virtually any size and shape.

Comprehensive World Explorer Atlas , Mineral Property Evaluation Richard L. Bullock,Scott Mernitz,2017-12-01 Everything sums up what must be considered for a properly documented property evaluation Less than 30% of the projects that are developed in the minerals industry yield the return on investment that was projected from the project feasibility studies The tools described in this handbook will greatly improve the probability of meeting your projections and minimizing project execution capital cost blowout that has become so prevalent in this industry in recent years Mineral Property Evaluation provides guidelines to follow in performing mineral property feasibility and evaluation studies and due diligence and in preparing proper documents for bankable presentations It highlights the need for a consistent systematic methodology in performing evaluation and feasibility work The objective of a feasibility and evaluation study should be to assess the value of the undeveloped or developed mineral property and to convey these findings to the company that is considering applying technical and physical changes to bring the property into production of a mineral product The analysis needs to determine the net present worth returned to the company for investing

in these changes and to reach that decision point as early as possible and with the least amount of money spent on the evaluation study All resources are not reserves nor are all minerals an ore The successful conclusion of any property evaluation depends on the development work and conclusions of the project team The handbook has a diverse audience Professionals in the minerals industry that perform mineral property evaluations Companies that have mineral properties and perform mineral property feasibility studies and evaluations or are buying properties based on property evaluation Financial institutions both domestic and overseas that finance or raise capital for the minerals industry Consulting firms and architectural and engineering contractors that utilize mineral property feasibility studies and need standards to follow And probably the most important the mining and geological engineering students and geology and economic geology students that need to learn the standards that they should follow throughout their careers
