 Interactions in Antimicrobial Chemotherapy* J. Drews, F.E. Hahn, 2012-12-06 The concept of chemotherapy as originated by
 Paul Ehrlich is based on the premise that antiparasitic drugs must have two properties they must first bind to specific
 structures of the parasite which Ehrlich called chemoreceptors Subsequent to their attachment to the chemoreceptor and by
 virtue of this binding they must possess the capacity to kill the parasite Since the host which is to be cured of an invading
 parasite also contains a large number of chemoreceptors that have the potential to bind toxic compounds the task of the
 chemo therapist is to identify chemoreceptors of the parasite which are not represented in the host and to design drugs
 which bind selectively to them In this context Ehrlich called for the complete and exhaustive knowledge of all the different
 chemoreceptors of a certain parasite as a sine qua non for success in chemotherapy Paradoxically and in spite of the fact that
 chemotherapy has become a very advanced and successful therapeutic discipline few of its triumphs have been achieved by
 following Ehrlich's original precepts On the contrary in the overwhelming majority of cases effective drugs have been
 discovered without any knowledge of their chemoreceptors and these drugs themselves have conversely been used as tools to
 study the nature of the chemoreceptors involved In other words chemotherapy notably antibacterial chemotherapy has been
 successful without ever living up to the fundamental standards put forward by Paul Ehrlich Monitoring and Managing
 Multi-hazards Jayanta Das, Sudip Kumar Bhattacharya, 2022-12-02 To monitor multi hazards Remote Sensing and GIS based
 multi criteria decision making MCDM techniques have been extensively used in recent years worldwide Since natural
 hazards cannot be eliminated only quantification of these events and reliable forecasting can alleviate their detrimental
 effects through which we can build more resilient and safe societies Moreover cultivating the proper knowledge of the multi
 hazards and their monitoring and management can fill the gap between science policy and the community concerned In an
 endeavor to understand and characterize the various hazards Monitoring and Managing Multi hazards A Multidisciplinary
 approach presents a synthesis of what cross disciplinary researchers know about these hazards and indigenous adaptation
 strategies The book therefore focuses on the use of precision techniques Remote Sensing and GIS technologies to quantify
 various natural environmental and social hazards along with the capacity building and sustainable mitigation strategies
 towards resilient societies It encompasses both thematic and regional case studies to highlight the dynamicity of climate
 change change of natural resources landscape water river agricultural and social ecosystems at various spatio temporal
 scales including theoretical and applied aspects The book gives readers an overview and analysis of traditional and advanced
 geospatial technologies on atmospheric lithospheric hydrosphere biospheric and socio economic contexts on all spatial and
 temporal scales regarding hazards and disasters and sustainable development and management for the future *Progress
