Caribbean Data Base: Programmer's Manual , R:BASE for the Programmer Nelson T. Dinerstein,1988-01-01

A Programmer's Guide to ZPL Lawrence Snyder,1999 ZPL is a new array programming language for science and engineering computation Designed for fast execution on both sequential and parallel computers it is intended to replace languages such as Fortran and C This guide provides a complete introduction to ZPL It assumes that the reader is experienced with an imperative language such as C Fortran or Pascal Though precise and thorough it does not attempt to be a complete reference manual but rather it illustrates typical ZPL usage and explains in an intuitive manner how the constructs work The emphasis is on teaching the reader to be a ZPL programmer Scientific computations are used as examples throughout and a list of common features is printed on the inside back cover for easy reference **C#**

might wonder how you'll ever learn everything you need to know. The answer is of course one step at a time. The first step to learning a language is the same as that of any other activity: building confidence. Programming is part art and part science. Although it might seem like magic, it's more akin to illusion. After you know how things work, a lot of the mysticism goes away, freeing you to focus on the mechanics necessary to produce any given desired result.

Book Description: Julia, with its dynamic nature and high performance, provides comparatively minimal time for the development of computational models with easy-to-maintain computational code. This book will be your solution-based guide as it will take you through different programming aspects with Julia. Starting with the new features of Julia 1.0, each recipe addresses a specific problem, providing a solution and explaining how it works. You will work with the powerful Julia tools and data structures along with the most popular Julia packages. You will learn to create vectors, handle variables and work with functions. You will be introduced to various recipes for numerical computing, distributed computing and achieving high performance. You will see how to optimize data science programs with parallel computing and memory allocation. We will look into more advanced concepts such as metaprogramming and functional programming. Finally, you will learn how to tackle issues while working with databases and data processing and will learn about on data science problems, data modeling, data analysis, data manipulation, parallel processing and cloud computing with Julia. By the end of the book, you will have acquired the skills to work more effectively with your data. What you will learn: Boost your code's performance using Julia's unique features. Organize data into fundamental types of collections: arrays and dictionaries. Organize data science processes within Julia and solve related problems. Scale Julia computations with cloud computing. Write data to IO streams with Julia and handle web transfer. Define your own immutable and mutable types. Speed up the development process using metaprogramming.
