Racial Variations in Immunity to Syphilis Chester North Frazier, Hongjiung Li, 1948 *Racial Variations in Immunity to Syphilis* Chester North Frazier, Hung-chiung Li, 1948 **A Companion to Paleopathology** Anne L. Grauer, 2016-01-19 A Companion to Paleopathology offers a comprehensive overview of this rapidly growing sub field of physical anthropology Presents a broad overview of the field of paleopathology integrating theoretical and methodological approaches to understand biological and disease processes throughout human history Demonstrates how paleopathology sheds light on the past through the analysis of human and non human skeletal materials mummified remains and preserved tissue Integrates scientific advances in multiple fields that contribute to the understanding of ancient and historic diseases such as epidemiology histology radiology parasitology dentistry and molecular biology as well as archaeological archival and historical research Highlights cultural processes that have an impact on the evolution of illness death and dying in human populations including subsistence strategies human environmental adaptations the effects of malnutrition differential access to resources and interpersonal and intercultural violence **Immunology of Human Infection** André J. Nahmias, Richard J. O'Reilly, 2013-11-09 When we were first approached by the senior editors of this series to edit a book on interactions between the host and infectious agents we accepted this offer as an exciting challenge The only condition readily agreed upon was that such a book should focus on the immunology of infections in humans Our reasons if not biases were severalfold We sensed that the fields of microbiology and immunology which had diverged as each was focusing on its individual search were coming together In agreement with the opinions expressed by Dr Richard Krause in the Introduction we strongly believed that the development of the immune system evolved in response to infectious agents and that the evolution of these agents was influenced in turn by the character of the host's responses An intensive examination of the multitude of primitive or more recently developed host defense mechanisms to determine their relative contribution to man's resistance to a given infectious agent appeared to us to be of crucial basic and practical interest Many immune mechanisms studied in animals were being explored in humans and it appeared timely to focus particularly on what was known about man's resistance to infectious agents correlating this information with lessons learned from relevant experiments in animal models **Catalog of Copyright Entries, Third Series** Library of Congress. Copyright Office, 1948 Disease and Fertility Joseph A. Jr. McFalls, 2012-12-02 Disease and Fertility covers the diseases that can cause population subfecundity This book is organized into six parts encompassing 20 chapters that provide detailed information on each of these diseases for evaluation of quantitative impact on fecundity and population fertility After briefly presenting an overview of the demography of subfecundity this book goes on exploring the pathophysiology and effect on fecundity of various diseases which are classified into three groups The first group includes the nonsexually transmitted diseases such as tuberculosis malaria filariasis schistosomiasis African sleeping sickness and Chagas disease The second group is composed of the

sexually transmitted diseases including gonorrhea nongonococcal cervicitis and urethritis and their complications syphilis and genital herpes mycoplasma and chlamydia The third group is composed of phenomena that can cause pelvic inflammatory disease and other adverse reproductive sequelae such as induced abortion childbirth the intrauterine device and female circumcision The final chapter considers the problems encountered in trying to link a particular disease to the fertility of a specific population This book is of great value to population students workers in medical community and professionals in disciplines that involve the study of both health and population
