Coll, Dulany Terrett, George Raynor Thompson, Harry C. Thomson, Joseph Bykofsky, Karl Christian Dod, Lenore Fine, Lida Mayo, Harold Larson, Jesse Arthur Remington, 1956 **Night Fighters: A Development and Combat History** Bill Gunston, 2004-01-15 From its beginnings during World War I the role of the dedicated night fighter aircraft and its pilots in the 21st century has evolved greatly This work reflects the massive changes in technology and in tactics It also covers the problems of tracking aerial targets by radar *United States Army in World War II.* , 1956 *Information and Revolutions in Military Affairs* Emily O. Goldman, 2013-09-13 Like the industrial revolution before it the information technology revolution appears to be creating a new ruling class a new economy and a new society Information technology is also transforming military operations and warfare A vast literature on the revolution in military affairs or RMA cites the important indeed dominant role of information technology in enabling a new military revolution This volume challenges conventional wisdom not by claiming

that information's impact on military operations is not positive or transformative but by claiming its impact is not new. Previous periods of military revolution can also be characterized as information revolutions. Through the close examination of six case studies of military transformation during the industrial age, the contributors to this volume demonstrate how the employment of emerging information systems was critical to realizing a major boost in military effectiveness. The most successful adaptations to the new environment were made by the most skillful users of information. This volume draws upon the expertise of leading military historians, political scientists, and defense practitioners to craft a set of original essays that provide the first retrospective examination of how information affects the process of military revolution. This book was previously published as a special issue of the *Journal of Strategic Studies*.

Physics in Oxford, 1839-1939 Robert Fox, Graeme Gooday, 2005-06-16. *Physics in Oxford 1839-1939* offers a challenging new interpretation of pre-war physics at the University of Oxford, which was far more dynamic than most historians and physicists have been prepared to believe. It explains, on the one hand, how attempts to develop the University's Clarendon Laboratory by Robert Clifton, Professor of Experimental Philosophy from 1865 to 1915, were thwarted by academic politics and funding problems, and latterly by Clifton's idiosyncratic concern with precision instrumentation. Conversely, by examining in detail the work of college fellows and their laboratories, the book reconstructs the decentralized environment that allowed physics to enter on a period of conspicuous vigour in the late nineteenth and early twentieth centuries, especially at the characteristically Oxonian intersections between physics, physical chemistry, mechanics, and mathematics. Whereas histories of Cambridge physics have tended to focus on the self-sustaining culture of the Cavendish Laboratory, it was Oxford's college-trained physicists who enabled the discipline to flourish in due course in university as well as college facilities, notably under the newly appointed professors J. S. E. Townsend from 1900 and F. A. Lindemann from 1919. This broader perspective allows us to understand better the vitality with which physicists in Oxford responded to the demands of wartime research on radar and techniques relevant to atomic weapons, and laid the foundations for the dramatic post-war expansion in teaching and research that has endowed Oxford with one of the largest and most dynamic schools of physics in the world.

Historical Dictionary of World War II Anne Sharp Wells, 2013-12-24. This dictionary covers the complex and costly conflict that began when Germany, ruled by Adolf Hitler and the Nazi Party, invaded neighboring Poland on 1 September 1939 and concluded when Germany surrendered on 7 May 1945, leaving much of the European continent in ruins and its population devastated. The war against Germany, Italy, and the other European Axis members was fought primarily in Europe, the Mediterranean, the Middle East, East and North Africa, and the Atlantic Ocean. The Axis powers were defeated by the Allies, led by the Grand Alliance of Great Britain, the United States, and the Union of Soviet Socialist Republics. *The Historical Dictionary of World War II: The War against Germany and Italy* relates the history of this war through a chronology, an introductory essay, maps, and photos, and an extensive bibliography. The dictionary section has more than 300 cross-referenced entries on the countries and geographical areas involved in the

war as well as the nations remaining neutral wartime alliances and conferences significant civilian and military leaders and major ground naval and air operations This book is an excellent access point for students researchers and anyone wanting to know more about World War II **United States Army in World War II** United States. Military History, Office of the Chief of, 1956 **Geography and Technology** Stanley D. Brunn, Susan L. Cutter, J.W. Harrington Jr., 2004-05-31 It is particularly appropriate that the AAG's Centennial Celebration should prompt the publication of a volume devoted to Geography and Technology New technologies have always been important in advancing geographic understanding but never have they been so thoroughly and rapidly transformative of the discipline as at this stage in geography's evolution Just as new technologies have profoundly expanded both research possibilities and the knowledge base of other disciplines such as biology physics or medicine so too are the revolutionary new geographic technologies developed during the past few decades extending frontiers in geographic research education and applications They are also creating new and resurgent roles for geography in both society and in the university This trend is still accelerating as the integration of geographic technologies such as the global positioning system and geographic information systems GPS GIS is creating an explosion of new real time real world applications and research capabilities The resultant dynamic space time interactive research and management environments created by interactive GPS GIS among other technologies places geography squarely at the forefront of advanced multidisciplinary research and modeling programs and has created core organization management tools geographic management systems which will dramatically change the way governments and businesses work in the decades ahead While these and other important geographic technologies including remote sensing location based services and many others addressed in this book are forging new opportunities for geography and geographers they also pose challenges *The RAF in the Battle of France and the Battle of Britain* Greg Baughen, 2017-09-15 In May 1940 the opposing German and Allied forces seemed reasonably well matched On the ground the four allied nations had more troops artillery and tanks Even in the air the German advantage in numbers was slight Yet two months later the Allied armies had been crushed The Netherlands Belgium and France had all surrendered and Britain stood on her own facing imminent defeat Subsequent accounts of the campaign have tended to see this outcome as predetermined with the seeds of defeat sown long before the fighting began Was it so inevitable Should the RAF have done more to help the Allied armies Why was such a small proportion of the RAF's frontline strength committed to the crucial battle on the ground Could Fighter Command have done more to protect the British and French troops being evacuated from the beaches of Dunkirk This study looks at the operations flown and takes a fresh look at the fatal decisions made behind the scenes decisions that unnecessarily condemned RAF aircrews to an unequal struggle and ultimately ensured Allied defeat What followed became the RAF's finest hour with victory achieved by the narrowest of margins Or was it as some now suggest a victory that was always inevitable If so how was the German military juggernaut that had conquered most of Europe so suddenly halted This study looks at the decisions and mistakes made by

both sides It explains how the British obsession with bomber attacks on cities had led to the development of the wrong type of fighter force and how only a fortuitous sequence of events enabled Fighter Command to prevail It also looks at how ready the RAF was to deal with an invasion How much air support could the British Army have expected Why were hundreds of American combat planes and experienced Polish and Czech pilots left on the sidelines And when the Blitz began and Britain finally got the war it was expecting what did this campaign tell us about the theories on air power that had so dominated pre war air policy All these questions and more are answered in Greg Baughen s third book Baughen describes the furious battles between the RAF and the Luftwaffe and the equally bitter struggle between the Air Ministry and the War Office and explains how close Britain really came to defeat in the summer of 1940
