Long Range Ballistic Missiles:

Long-range Ballistic Missiles Eric Burgess, 1961 **Long-Range Ballistic Missile Defense in Europe** Steven A. Hildreth, 2007 Successive U S administrations have urged the creation of an anti missile system to protect against threats from rogue states The Bush Administration believes that North Korea and Iran are strategic threats and questions whether they can be deterred by conventional means The Administration has built long range missile defense bases in Alaska and California to protect against North Korean missiles The system has been tested with mixed results and questions have been raised about its effectiveness The Administration has proposed deploying a ground based mid course defense GMD element of the larger Ballistic Missile Defense System BMDS in Europe to defend against the threat of long range missiles from Iran The system would include 10 interceptors in Poland a fixed radar installation in the Czech Republic and another forward deployed radar elsewhere in the region but closer to Iran Deployment of the European GMD capability is scheduled to be completed by 2013 at a cost of 4 04 billion **The Development of Ballistic Missiles in the United States Air Force, 1945-1960** Jacob Neufeld, 1990 Following World War II the onset of nuclear weapons long range jet bombers and ballistic missiles radically changed American foreign policy and military strategy The United States Air Force led by men of far sighted vision and uncommon dedication accepted the challenge of organizing and leading a massive research and development effort to build ballistic missiles In the quarter of the century since these weapons have constituted one of the tree legs of the strategic triad the basis of America s strategy of deterring nuclear war yet they have received less attention from the public and within the Air Force than the more glamorous manned bombers of the Strategic Air Command or the missile launching submarines of the U S Navy This volume attempts to correct the imbalance by telling the story of development of Air Force ballistic Missiles It concentrates on the first generation of ballistic missiles the intercontinental Atlas and Titan and the intermediate range Thor Although the effort to develop rockets has a longer history than commonly assumed the modern history spans the relatively short era from 1945 to 1960 During this brief interval missiles advanced from drawing board to alert status where the next generation now remains poised to deter war *Conventional Prompt Global Strike (PGS) and Long-Range Ballistic Missiles (BM)* Amy F. whether the weapon carried a nuclear or conventional warhead Congress has raised concerns about this possibility in the past While most analysts expected the Air Force to take the lead in deploying a hypersonic delivery system on a modified ballistic missile a concept known as the conventional strike missile CSM tests of the hypersonic vehicle known as the HTV 2 have not succeeded An alternative glider known as the AHW may be deployed on missiles based at sea Congress may review other weapons options for the CPGS mission including bombers cruise missiles and possibly scramjets or other advanced technologies Warheads deployed on boost glide systems would not be affected by the 2010 New START Treaty because these are new types of strategic offensive arms But those deployed in existing types of reentry vehicles on existing types of ballistic missiles would count against the treaty limits This report will be updated as needed

Congressional Record United States. Congress,2000 The National Space Transportation Policy ,1995 **The national space transportation policy : issues for Congress.** ,1995 In responding to the political and military challenges of the Cold War and the urge to explore and exploit outer space the United States developed a capable fleet of space transportation systems for carrying cargo and people into space and for ensuring a credible strategic nuclear deterrent These systems are owned and managed by the National Aeronautics and Space Administration the Department of Defense and private industry In recent years increasing federal budget constraints commercial competition from foreign launch firms and a desire to continue an ambitious space program have created pressures within the United States to reduce the costs of access to space Significantly lower space transportation costs would make the U S space industry more commercially competitive foster the expansion and creation of new space markets and ensure access to space for government payloads and manned missions This report prepared for the House Committee on Science is the first in a broad assessment of the health and future prospects of the U S space transportation technology and industrial base The report focuses on the Clinton Administration s National Space Transportation Policy which was released last fall It examines administration policy in light of the implementation plans prepared by NASA DOD and the Transportation and Commerce Departments As the report notes the new policy brings a welcome measure of order to the sometimes chaotic structure of U S space transportation activities The policy also emphasizes the important contribution private industry can make to the direction and development of U S space transportation capabilities However an analysis of the policy and implementation plans also raises some issues that might be of interest to Congress as it debates space transportation legislation oversight and funding
