Long-term Groundwater Monitoring Design, 2003

Water Resources Research Progress Liam N. Robinson, 2008

Water resources are sources of water that are useful or potentially useful to humans They are important because they are needed for life to exist Many uses of water include agricultural industrial household recreational and environmental activities Virtually all of these human uses require fresh water Only 2.7% of water on the Earth is fresh water and over two thirds of this is frozen in glaciers and polar ice caps leaving only 0.007% available for human use Fresh water is a renewable resource yet the world's supply of clean fresh water is steadily decreasing Water demand already exceeds supply in many parts of the world and as world population continues to rise at an unprecedented rate many more areas are expected to experience this imbalance in the near future The framework for allocating water resources to water users where such a framework exists is known as water rights This new book presents recent and important research in the field

Contaminants in the Subsurface National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Source Removal of Contaminants in the Subsurface, 2005-03-23 At hundreds of thousands of commercial industrial and military sites across the country subsurface materials including groundwater are contaminated with chemical waste The last decade has seen growing interest in using aggressive source remediation technologies to remove contaminants from the subsurface but there is limited understanding of 1 the effectiveness of these technologies and 2 the overall effect of mass removal on groundwater quality This report reviews the suite of technologies available for source remediation and their ability to reach a variety of cleanup goals from meeting regulatory standards for groundwater to reducing costs The report proposes elements of a protocol for accomplishing source remediation that should enable project managers to decide whether and how to pursue source remediation at their sites

System Earth via Geodetic-Geophysical Space Techniques Frank M. Flechtner, Thomas Gruber, Andreas Güntner, M. Manda, Markus Rothacher, Tilo Schöne, Jens Wickert, 2010-07-10 Our planet is currently experiencing substantial changes due to natural phenomena and direct or indirect human interactions Observations from space are the only means to monitor and quantify these changes on a global and long term perspective Continuous time series of a large set of Earth system parameters are needed in order to better understand the processes causing these changes as well as their interactions This knowledge is needed to build comprehensive Earth system models used for analysis and prediction of the changing Earth Geodesy and geophysics contribute to the understanding of system Earth through the observation of global parameter sets in space and time such as tectonic motion Earth surface deformation sea level changes and gravity magnetic and atmospheric fields In the framework of the German geoscience research and development programme GEOTECHNOLOGIEN research projects related to the theme Observing the Earth System from Space have been funded within two consecutive phases since 2002 both covering 3 years The projects address data analysis and model development using the satellite missions CHAMP GRACE GOCE and complementary ground or airborne observations The results of the first phase projects have been published in the Springer book titled Observation of the Earth System from Space edited by Flury Rummel Reigber Rothacher Boedeker and Schreiber in 2006 The present book titled System Earth via Geodetic Geophysical Space Techniques summarizes in 40 scientific papers the

Clark, Simon Hakim, 2013-10-04 Urban water and wastewater systems have an inherent vulnerability to both manmade and natural threats and disasters including droughts earthquakes and terrorist attacks It is well established that natural disasters including major storms such as hurricanes and flooding can effect water supply security and integrity Earthquakes and terrorist attacks have many characteristics in common because they are almost impossible to predict and can cause major devastation and confusion Terrorism is also a major threat to water security and recent attention has turned to the potential that these attacks have for disrupting urban water supplies There is a need to introduce the related concept of Integrated Water Resources Management which emphasizes linkages between land use change and hydrological systems between ecosystems and human health and between political and scientific aspects of water management An expanded water security agenda should include a conceptual focus on vulnerability risk and resilience an emphasis on threats shocks and tipping points and a related emphasis on adaptive management given limited predictability Internationally concerns about water have often taken a different focus and there is also a growing awareness including in the US that water security should include issues related to quantity climate change and biodiversity impacts in addition to terrorism This presents contributions from a group of internationally recognized experts that attempt to address the four areas listed above and includes suggestions as to how to deal with related problems It also addresses the new and potentially growing issue of cyber attacks against water and waste water infrastructure including descriptions of actual attacks making it of interest to scholars and policy makers concerned with protecting the water supply *Optimal Calibration, Uncertainty Assessment, and Long-term Monitoring Using Computationally Expensive Groundwater Models* Pradeep Mugunthan, 2005
