Mixed Categories:

Categorization and Category Change Gianina Iordăchioaia, Isabelle Roy, Kaori Takamine, 2014-07-08 This collection of selected papers addresses theoretical and empirical issues related to lexical categories categorization and category change Any grammatical description makes use of parts of speech The proper set of lexical categories and the definitions of their properties cross linguistically has been a remnant issue in linguistics since the beginnings of grammatical description Besides the traditional classification of lexical classes with their morphological syntactic and or interpretational properties has led to the emergence of mixed categories which are problematic in linguistic theory since the current systems either feature based or syntactic have no means to express fuzziness This volume addresses both these issues in two thematic parts The first part Categories and categorization consists of papers that tackle the problem of defining categories and mixed categories and its reflex on the inventory The second part Issues in category change comprises investigations on category change focusing on nominalizations which is the test ground for a theory of category change and word formation The papers included in this part discuss among others the similarities and mismatches between derived nominals and the corresponding verbs in terms of argument realization and eventive interpretation The languages investigated in the volume include English French German Greek Japanese Romanian Russian Spanish and Swedish This book targets researchers and advanced students in theoretical linguistics

Syntactic Categories Gisa Rauh, 2010-06-03 This book offers a systematic account of syntactic categories the building blocks of sentences and the units of grammatical analysis and explains their description in different formal as well as functional theories of language including language typology Its clear and balanced exposition will be widely welcomed by students

The Palgrave International Handbook of Mixed Racial and Ethnic Classification Zarine L. Rocha, Peter J. Aspinall, 2020-01-03 This handbook provides a global study of the classification of mixed race and ethnicity at the state level bringing together a diverse range of country case studies from around the world The classification of race and ethnicity by the state is a common way to organize and make sense of populations in many countries from the national census and birth and death records to identity cards and household surveys As populations have grown diversified and become increasingly transnational and mobile single and mutually exclusive categories struggle to adequately capture the complexity of identities and heritages in multicultural societies State motivations for classification vary widely and have shifted over time ranging from subjugation and exclusion to remediation and addressing inequalities The chapters in this handbook illustrate how differing histories and contemporary realities have led states to count and classify mixedness in different ways for different reasons This collection will serve as a key reference point on the international classification of mixed race and ethnicity for students and scholars across sociology ethnic and racial studies and public policy as well as policy makers and practitioners

Mixed Race Identities P. Aspinall, M. Song, 2013-07-26 This book explores the ethnic and racial options exercised by young mixed race people in Britain It reveals the diverse ways in which young people identify and

experience their mixed status the complex nature of such identities and the rise of other identity strands which are now challenging race and ethnicity as dominant and salient identities

The Adjectival Category D. N. Shankara Bhat,1994-01-01 This monograph sets out i to establish criteria for differentiating adjectives from other word classes for languages in which they form a distinct category and ii to establish criteria for determining their non identity with words from other categories for languages in which they do not As languages show various gradations in the extent to which adjectives can be distinguished from other word classes the author discusses idealized language types thereby providing a model for the analysis of natural languages The book argues that adjectives do not uniformly show all differentiating characteristics and that these characteristics are semantically relevant and functionally motivated for instance when word classes are used in functions not their own they manifest characteristics of the categories to which the relevant functions belong The second part of the book discusses three distinct idealized languages types without a distinct adjectival category in which property words remain undifferentiated from i nouns ii verbs and iii nouns as well as verbs These three types are shown to represent gradations of distinctions between word classes as they occur in natural languages and to manifest various degrees of the corresponding functional neutralizations In the final chapter the wider theoretical implications of this work for the study of categories are discussed

Lexical Categories and Root Classes in Amerindian Languages Ximena Lois,Valentina Vapnarsky,2006 The problem of lexical categories and root class determination is fundamental in linguistic description and theory Research on this topic has been particularly stimulated by studies of Amerindian languages The essays in this collection written by specialists in languages from South Middle and North America provide new insights into processes levels functions and the acquisition of lexical categories from various recent theoretical perspectives The volume also addresses recent debates about root indeterminacy Focusing on morphosyntax phonology and semantics the contributions offer invaluable material for typological generalizations and for comprehension of the nature of the mental lexicon

Decisions and Orders of the National Labor Relations Board United States. National Labor Relations Board,1995

The Rise of Functional Categories Elly van Gelderen,1993 In recent years word order has come to be seen within a Government Binding Minimalist framework as determined by functional as well as lexical categories Within this framework functional categories are often seen as present in every language without evidence being available in that language This book contains arguments that even though Universal Grammar makes functional categories available the language learner must decide whether or not to incorporate them in his or her grammar For instance it is shown that English has one not two as often assumed functional category between the complementizer and the Negation but that languages such as Dutch Swedish German and Old and Middle English have none The title of the book can be seen in terms of the direction current research is taking it can also be seen in terms of the changes that have taken place in English

Lexical Relatedness Andrew Spencer,2013-10-03 This book argues a that there is no principled way to distinguish inflection and derivation and b that this

fatally undermines conventional approaches to morphology Conceptual shortcomings in the relation between derivational and lexically derived word forms Andrew Spencer suggests call into question the foundation of the inferential derivational approach Prototypical instances of inflection and derivation are separated by a host of intermediate types of lexical relatedness some discussed in the literature others ignored Far from finding these an embarrassment Professor Spencer deploys the wealth of types of relatedness in a variety of languages including Slavic Uralic Australian Germanic and Romance to develop an enriched and morphologically informed model of the lexical entry He then uses this to build the foundations for a model of lexical relatedness that is consistent with paradigm based models Lexical Relatedness is a profound and stimulating book It will interest all morphologists lexicographers and theoretical linguists more generally **Category**

Change from a Constructional Perspective Kristel Van Goethem, Muriel Norde, Evie Coussé, Gudrun

Vanderbauwhede, 2018-03-15 Category change broadly defined as the shift from one word class to another is often studied as part of other changes such as grammaticalization or lexicalization but not in its own right This volume offers a survey of different types of category change and their properties e g abrupt versus gradual changes morphological versus syntactic changes or context independent versus context sensitive changes The purpose of this collection of papers is to explore the concepts of linguistic category and category change from the perspective of Construction Grammar Using data from a variety of languages the authors address a number of themes that are central to current theorizing about category change such as the question of whether or not categories should be considered discrete entities how new categories arise or whether category change can be considered as the emergence of a new construction i e a new form meaning pairing The novel approach advanced in this volume will be of interest to historical linguists as well as to general linguists working on the nature of linguistic categories **Advanced Statistical Methods in Process Monitoring, Finance, and Environmental**

Science Sven Knoth, Yarema Okhrin, Philipp Otto, 2024-10-22 This book presents a unique collection of contributions on modern methods and applications in three key areas of statistics celebrating the significant work of Wolfgang Schmid in this field It is structured thematically into parts focusing on statistical process monitoring financial statistics and spatial statistics with environmetrics each featuring chapters from leading experts The opening articles on statistical process monitoring present novel methodologies for the detection of anomalies and control charting techniques which are crucial for maintaining quality in manufacturing processes Detailed discussions are included on integrating multivariate statistical methods and real time monitoring to enhance process reliability and efficiency The part on financial statistics explores rigorous approaches in financial econometrics with an emphasis on dynamic modelling of market volatility and risk assessment Contributions cover advanced asset allocation strategies leveraging high dimensional data analysis and the application of machine learning techniques Spatial statistics and environmetrics are addressed through innovative research on the statistical analysis of environmental data This includes the use of geostatistical models and hybrid models that combine traditional statistical

techniques with machine learning to improve the prediction of environmental phenomena Key topics here involve the modelling of extremes and airborne pollutants the prediction of earthquakes using a smartphone based sensor network and reviews of selected topics essential in modern spatial statistics Each part not only reflects Wolfgang Schmid s interests and impact in these areas but also provides detailed theoretical and applied studies demonstrating how these sophisticated statistical methods can be effectively employed in practical scenarios This makes the book an indispensable resource for researchers and practitioners looking to apply cutting edge statistical techniques in these complex fields

Handbook of Mixed Methods in Social & Behavioral Research Abbas Tashakkori, Charles Teddlie, 2003 The Handbook contains a gold mine of articles by leading scholars on what has come to be known as the third methodological movement in social research Aimed at surveying the differing viewpoints and disciplinary approaches of mixed methods this breakthrough book examines mixed methods from the research enterprise to paradigmatic issues to application The book also discusses the strengths and weaknesses of mixed methods designs and provides an array of specific examples in a variety of disciplines from psychology to nursing The book closes with a brief section on how to teach and perform collaborative research using a mixed methods research design Written so that it can be used either as a pedagogical tool or as a reference for researchers the book is rich in examples and includes a glossary easy to follow diagrams and tables to help readers become more familiar with the language and controversies in this evolving area

Connecting Jesus to Social Justice Thomas Hughson,2013-10-10 Many Christians see the societal dimension of their faith as a matter of biblical and social ethics Returning to classical Christology *Connecting Jesus to Social Justice* explores messianic potential in the Council of Chalcedon on the divine identity of Christ Who Jesus is makes all the difference to Christian entrance into the public sphere on behalf of a just society The Messiah s divinity bears on social mission directed toward a just social order Theological appropriation of Chalcedon overcomes a gap between the professing the Creed and interpreting social existence in light of a just social order *Connecting Jesus to Social Justice* argues a doctrinally traditional orthodox basis for Christian participation in the public sphere on behalf of social justice The book addresses a situation internal to churches in the U S from a Catholic perspective yet not without analogies in other churches and Christian movements Applying traditional Christology to contemporary social mission solidifies an answer to adversarial queries on the appropriateness of a social

agenda Implications in the classical Christology also confirm churches and discipleship in commitment to social justice promoted through a subaltern counter public and then by word and deed in the public sphere *Pragmatics and Education* F. Lowenthal,F. Vandamme,2013-11-22 F Lowenthal Universite de l Etat a Mons 24 rue des Dominicains 7000 Mons Belgium series of Language and Language Acquisition conferences The was born in Mons in 1977 One day the Dean said to me You are doing research in that field why don t you try to organize a small conference I thought about it tried to contact people received several answers and finally told the Dean There will be so many participants and I need so much money to organize the conference His answer was a short one I told you to organize a SMALL conference I do not know what he did but he succeeded in working a miracle the funds were found and the conference took place This miracle has been repeated twice once in Mons 1980 and once in Ghent 1983 The group of people interested in these conferences has become bigger but the aim of the organizers is still the same to bring together people working in different fields such as mathematics philosophy linguistics logic computer science education psychology medicine and to give them the possibility to have long discussions even if the time devoted to the presentation of papers has to be reduced *Developing Areas* Vijayan Pillai,Lyle Shannon,2024-11-01 With subjects ranging from the global challenge of the AIDS epidemic to the role of family planning in developing nations and the link between Central America s forests and North America s hamburgers this interdisciplinary introduction by some of the world s foremost experts in development studies will be an essential text for courses in this area It provides an exhaustive overview of the social political economic and population problems of countries in what is usually referred to as the Third World and more recently the Fourth World Although colonialism is considered as a contributing factor to underdevelopment emphasis in this volume is placed on the interrelation of major social institutions their impact on economic and social development and the effect of rapidly expanding industrialization on the ecosystem *Participles in Rigvedic Sanskrit* John J. Lowe,2015-04-23 This book examines several thousand examples of tense aspect stem participles in the Rigveda and the passages in which they appear in terms of both their syntax and semantics The Rigveda is an ancient collection of sacred Indian hymns written in Vedic Sanskrit and is one of the oldest extant texts in any Indo European language It is also a poetic text in which deliberate obscurity is the governing aesthetic and in which the rules of language are pushed to their limits in order to produce the ideal poetic expression Many Vedic sentences are of controversial disputed meaning and Vedic scholarship is thus fraught with controversy John J Lowe applies formal linguistic analysis to the data and produces a comprehensive formal model of how participles are used The author uses his findings to recategorize the data by defining certain stems and stem types as outside the synchronic category of participle on the basis of their syntactic and semantic properties He suggests alternative sources for these forms and considers the linguistic processes that transformed old participles into non participial entities In his conclusion he reassesses the category of participles within the verbal and nominal systems looks at their prehistory in Proto Indo European and describes their universal typological characteristics

Among his conclusions are that tense aspect stem participles have the technical properties of adjectival verbs not verbal adjectives and that such participles are not fully dependent on corresponding finite verbal forms That is a perfect participle for example need not share all the semantic and functional features of the finite perfect forms built to the same stem These and many other conclusions drawn either directly challenge or radically revise received opinion and recent work
