

MIXED HODGE STRUCTURES ASSOCIATED WITH ISOLATED SINGULARITIES

J. H. M. STEENBRINK

Introduction. This paper deals with applications of the theory of mixed Hodge structures to the study of isolated singularities. In contrast with most of the work that has been done in mixed Hodge structures, we try to avoid arguments which refer to the singularities as lying on a compact algebraic variety. Instead, our work depends heavily on resolution of singularities and on the (global) geometric properties of the exceptional divisor. We first study the mixed Hodge structure on the local cohomology groups of an isolated singularity of a complex space. The main result is Corollary (1.12), which is a consequence of the decomposition theorem in intersection cohomology, proved by P. Deligne, O. Gabber, A. Beilinson and I. Bernstein. It provides a bound on the weight that may occur on the local cohomology groups. It has been observed first by Deligne on the Metz Colloquium 1974 "sur la monodromie" that the vanishing (co)homology groups of a one-parameter smoothing of an isolated singularity carry a mixed Hodge structure. The theory has been developed in [26] for isolated hypersurface singularities and in §2 we describe its properties for the general case. The main properties are listed in (2.6); an important role is played by the "variation of the monodromy". We find that certain invariants of the mixed Hodge structure are in fact independent of the smoothing (Proposition (2.13) and Theorem (2.24)). For the surface case we find proofs of results, conjectured by J. Wahl [30] and proved before under the assumption that the smoothing can be globalized. In the last section we introduce the concept of a Du Bois singularity, and relate this to the problem of cohomological insignificance of smoothings. We classify two-dimensional isolated Gorenstein singularities with the Du Bois property and study smoothings of isolated Du Bois singularities. This work has been stimulated very much by conversations and correspondence with many people, among whom I like to mention R.-O. Buchweitz, A. Durfee, J. Carlson, I. N. Shepherd-Barron
