**Routing of Time-Sensitive Data in Mobile Ad Hoc Networks** NECDET. KILIC, 2025-05-22 Mobile

networks take the communication concept one step further than wireless networks. In these networks all nodes in the network are assumed to be mobile. These networks are also called mobile ad hoc networks due to their mobility and random configurations. Ad hoc networking is a relatively new concept; consequently, many researches are in progress focusing on each level of the network stack of ad hoc networks. This research focuses on the routing of time sensitive data in ad hoc networks. A routing protocol named Ad hoc On demand Distance Vectoring (AODV) which has been developed by Internet Engineering Task Force (IETF) for ad hoc networks has been studied. Taking this protocol as a point of departure, a new routing protocol named as Real Time Routing Protocol (RTRP) was developed while considering the characteristics of time sensitive data. These two routing protocols have been modeled using OPNET, a discrete event network simulation tool, and simulations were run to compare the performances of these protocols. *Evolutionary Algorithms for Mobile Ad Hoc Networks* Bernabé Dorronsoro, Patricia Ruiz, Grégoire Danoy, Yoann Pigné, Pascal Bouvry, 2014-04-08. Describes how evolutionary algorithms (EAs) can be used to identify model and minimize day to day problems that arise for researchers in optimization and mobile networking. Mobile ad hoc networks, MANETs, vehicular networks, VANETs, sensor networks, SNs, and hybrid networks: each of these requires a designer's keen sense and knowledge of evolutionary algorithms in order to help with the common issues that plague professionals involved in optimization and mobile networking. This book introduces readers to both mobile ad hoc networks and evolutionary algorithms, presenting basic concepts as well as detailed descriptions of each. It demonstrates how metaheuristics and evolutionary algorithms (EAs) can be used to help provide low cost operations in the optimization process, allowing designers to put some intelligence or sophistication into the design. It also offers efficient and accurate information on dissemination algorithms, topology management, and mobility models to address challenges in the field. *Evolutionary Algorithms for Mobile Ad Hoc Networks* instructs on how to identify model and optimize solutions to problems that arise in daily research. Presents complete and up to date surveys on topics like network and mobility simulators. Provides sample problems along with solutions, descriptions used to solve each, with performance comparisons. Covers current relevant issues in mobile networks.
