Lui, 2003-06-29 Welcome to the Second International Conference on Mobile Data Management MDM2001 The conference serves as a forum for the exchange of technical ideas and research results in the areas of mobility and database management This year we have a very exciting program for MDM2001 Many quality papers were submitted to the conference All of the submitted papers were viewed by at least three PC members Due to the limitations of the program schedule as well as the desire to organize the conference using a single track format we selected only 18 papers for full presentation at the conference As a result many excellent papers could not be accepted The papers chosen for presentation span a large range of topics from network protocol issues up to the semantics of mobile applications The common theme of all these papers is their recognition of the central role played by data management techniques in the development of the emerging world of mobile and wireless applications We have loosely organized these papers into six areas 1 DATA MANAGEMENT ARCHITECTURES 2 CONTENT DELIVERY 3 DATA BROADCASTING 4 CACHING AND HOARDING 5 COPING WITH MOVEMENT 6 NETWORKS AND SYSTEMS ISSUES In addition to the research track we have sought to broaden the scope of the conference with an industrial session as well as poster presentations Overall the program strikes a comfortable balance between applied and theoretically oriented papers

Data Management for Mobile Computing Evaggelia Pitoura, George Samaras, 1998 Universal access and management of information has been one of the driving forces in the evolution of computer technology Central computing gave the ability to perform large and complex computations and advanced information manipulation Advances in networking connected computers together and led to distributed computing Web technology and the Internet went even further to provide hyper linked information access and global computing However restricting access stations to physical locations limits the boundary of the vision The real global network can be achieved only via the ability to compute and access information from anywhere and anytime This is the fundamental wish that motivates mobile computing This evolution is the cumulative result of both hardware and software advances at various levels motivated by tangible application needs Infrastructure research on communications and networking is essential for realizing wireless systems Equally important is the design and implementation of data management applications for these systems a task directly affected by the characteristics of the wireless medium and the resulting mobility of data resources and computation Although a relatively new area mobile data management has provoked a proliferation of research efforts motivated both by a great market potential and by many challenging research problems The focus of Data Management for Mobile Computing is on the impact of mobile computing on data management beyond the networking level The purpose is to provide a thorough and cohesive overview of recent advances in wireless and mobile data management The book is written with a critical attitude This volume probes the new issues introduced by wireless and mobile access to data and their conceptual and practical consequences Data Management

for Mobile Computing provides a single source for researchers and practitioners who want to keep abreast of the latest innovations in the field. It can also serve as a textbook for an advanced course on mobile computing or as a companion text for a variety of courses including courses on distributed systems, database management, transaction management, operating or file systems, information retrieval or dissemination, and web computing.

Mobile Computing and Wireless Communications Amjad Umar, 2004. This book is suitable for IS/IT courses and self study. It presents a comprehensive coverage of the technical as well as business management aspects of mobile computing and wireless communications. Instead of one narrow topic, this classroom tested book covers the major building blocks: mobile applications, mobile computing platforms, wireless networks, architectures, security, and management of mobile computing and wireless communications. Numerous real life case studies and examples highlight the key points. The book starts with a discussion of m-business and m-government initiatives and examines mobile computing applications such as mobile messaging, m-commerce, M-CRM, M-portals, M-SCM, mobile agents, and sensor applications. The role of wireless Internet and Mobile IP is explained and the mobile computing platforms are analyzed with a discussion of wireless middleware, wireless gateways, mobile application servers, WAP i-mode, J2ME, BREW, Mobile Internet Toolkit, and Mobile Web Services. The wireless networks are discussed at length with a review of wireless communication principles, wireless LANs with emphasis on 802.11 LANs, Bluetooth, wireless sensor networks, UWB, Ultra Wideband, cellular networks ranging from 1G to 5G, wireless local loops, FSO, Free Space Optics, satellites, communications, and deep space networks. The book concludes with a review of the architectural security and management support issues and their role in building, deploying, and managing wireless systems in modern settings.

Mobile Data Management Kian-Lee Tan, Michael J. Franklin, John C.-S. Lui, 2000-12-13. Welcome to the Second International Conference on Mobile Data Management (MDM2001). The conference serves as a forum for the exchange of technical ideas and research results in the areas of mobility and database management. This year we have a very exciting program for MDM2001. Many quality papers were submitted to the conference. All of the submitted papers were viewed by at least three PC members. Due to the limitations of the program schedule as well as the desire to organize the conference using a single track format, we selected only 18 papers for full presentation at the conference. As a result, many excellent papers could not be accepted. The papers chosen for presentation span a large range of topics from network protocol issues up to the semantics of mobile applications. The common theme of all these papers is their recognition of the central role played by data management techniques in the development of the emerging world of mobile and wireless applications. We have loosely organized these papers into six areas: 1. DATA MANAGEMENT ARCHITECTURES, 2. CONTENT DELIVERY, 3. DATA BROADCASTING, 4. CACHING AND HOARDING, 5. COPING WITH MOVEMENT, 6. NETWORKS AND SYSTEMS ISSUES. In addition to the research track, we have sought to broaden the scope of the conference with an industrial session as well as poster presentations. Overall, the program strikes a comfortable balance between applied and theoretically oriented papers.

collection management processing analysis and delivery of real time geospatial data using distributed geosensor networks This represents an evolution of the traditional static and centralized geocomputational paradigm to support the collection of both temporally and spatially high resolution up to date data over a broad geographic area and to use sensor networks as actuators in geographic space Sensors in these environments can be static or mobile and can be used to passively collect information about the environment or eventually to actively influence it The research challenges behind this novel paradigm extend the frontiers of traditional GIS research further into computer science addressing issues like data stream processing mobile computing location based services temporal spatial queries over geosensor networks adaptable middleware sensor data integration and mining automated updating of geospatial databases VR modeling and computer vision In order to address these topics the GSN 2006 conference brought together leading experts in these fields and provided a three day forum to present papers and exchange ideas

Future Information Technology James J. (Jong Hyuk) Park, Yi Pan, Cheon-Shik Kim, Yun Yang, 2014-05-03 The new multimedia standards for example MPEG 21 facilitate the seamless integration of multiple modalities into interoperable multimedia frameworks transforming the way people work and interact with multimedia data These key technologies and multimedia solutions interact and collaborate with each other in increasingly effective ways contributing to the multimedia revolution and having a significant impact across a wide spectrum of consumer business healthcare education and governmental domains This book aims to provide a complete coverage of the areas outlined and to bring together the researchers from academic and industry as well as practitioners to share ideas challenges and solutions relating to the multifaceted aspects of this field

Advances in Intelligent Information and Database Systems Ngoc-Thanh Nguyen, Radoslaw Katarzyniak, 2010-03-16

Intelligent information and database systems are two closely related and we established subfields of modern computer science. They focus on the integration of artificial intelligence and classic database technologies in order to create the class of next generation information systems. The major target of this new generation of systems is to provide end users with intelligent behavior simple and or advanced learning problem solving uncertain and certain reasoning self organization cooperation etc. Such intelligent abilities are implemented in classic information systems to make them autonomous and user oriented in particular when advanced problems of multimedia information and knowledge discovery access retrieval and manipulation are to be solved in the context of large distributed and heterogeneous environments. It means that intelligent knowledge based information and database systems are used to solve basic problems of large collections management carry out knowledge discovery from large data collections reason about information under uncertain conditions support users in their formulation of complex queries etc. Topics discussed in this volume include but are not limited to the foundations and principles of data information and knowledge models methodologies for intelligent information and database systems analysis design implementation validation maintenance and evolution.

Advances in Spatial and Temporal Databases Dimitris Papadias, 2007-06-29 The refereed proceedings of the 10th International Symposium on Spatial and Temporal Databases SSTD 2007 held in Boston MA USA in July 2007. Advances in Computers, 2016-07-04 *Advances in Computers* an ongoing series since 1960 presents detailed coverage of innovations in computer hardware software theory design and applications. It has also provided contributors with a medium in which they can explore their subjects in greater depth and breadth than journal articles usually allow. As a result many articles have become standard references and continue to be of significant lasting value in this rapidly expanding field. Presents detailed coverage of recent innovations in computer hardware software theory design and applications. Includes in depth surveys and tutorials on new computer technology that pertain to computing with topics such as combinatorial testing constraint based testing and black box testing. Written by well known authors and researchers in the field. Includes extensive bibliographies with most chapters. Presents volumes devoted to single themes or subfields of computer science.
