F&S Index United States Annual, 1999 *Tank Waste Retrieval, Processing, and On-site Disposal at Three Department of Energy Sites* National Research Council, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Committee on the Management of Certain Radioactive Waste Streams Stored in Tanks at Three Department of Energy Sites, 2006-09-12. DOE Tank Waste: How clean is clean enough? The U.S. Congress asked the National Academies to evaluate the Department of Energy's DOE's plans for cleaning up defense-related radioactive wastes stored in underground tanks at three sites: the Hanford Site in Washington State, the Savannah River Site in South Carolina, and the Idaho National Laboratory. DOE plans to remove the waste from the tanks, separate out high-level radioactive waste to be shipped to an off-site geological repository, and dispose of the remaining lower-activity waste on-site. The report concludes that DOE's overall plan is workable, but some important challenges must be overcome, including the removal of residual waste from some tanks, especially at Hanford and Savannah River. The report recommends that DOE pursue a more risk-informed, consistent, participatory, and transparent process for making decisions about how much waste to retrieve from tanks and how much to dispose of on-site. The report offers several other detailed recommendations to improve the technical soundness of DOE's tank cleanup plans.
