Mobile Communication Systems:

Mobile Communication Systems John David Parsons, 2012-12-06 During the past decade there has been a dramatic change in the nature of mobile communications technology and its impact on the general communications environment In the 1970s mobile radio was a minority activity in communications based on relatively unsophisticated technology The 1980s however have seen the emergence of analogue cellular systems and the definition of future digital systems and the predicted demand for these services is such that investigations into the use of higher frequency bands have already begun It is predicted that by the late 1990s the personal communications world will have resulted in the majority of adults in Europe and North America being dependent on radio connected terminals of various kinds for more than 50% of their total telecommunications needs The technology which will form the basis of this revolution has now been defined at least in outline and the fixed and mobile equipment that will be used in systems of the future will bear little resemblance to that available even ten years ago It is impossible within the confines of a single relatively short book to cover all the subject areas needed for a study of this exciting and expanding field of technology We have perforce been selective and have chosen those topics which we believe to be of primary importance at the present time Mobile Communication Systems John David Parsons, 2012-06-12 During the past decade there has been a dramatic change in the nature of mobile communications technology and its impact on the general communications environment In the 1970s mobile radio was a minority activity in communications based on relatively unsophisticated technology The 1980s however have seen the emergence of analogue cellular systems and the definition of future digital systems and the predicted demand for these services is such that investigations into the use of higher frequency bands have already begun It is predicted that by the late 1990s the personal communications world will have resulted in the majority of adults in Europe and North America being dependent on radio connected terminals of various kinds for more than 50% of their total telecommunications needs The technology which will form the basis of this revolution has now been defined at least in outline and the fixed and mobile equipment that will be used in systems of the future will bear little resemblance to that available even ten years ago It is impossible within the confines of a single relatively short book to cover all the subject areas needed for a study of this exciting and expanding field of technology We have perforce been selective and have chosen those topics which we believe to be of primary importance at the present time **Principles of Mobile Communication** Gordon L. Radio Receivers for Systems of Fixed and Mobile Communications Vasilii V. Logvinov, Sergey M. Smolskiy, 2022-05-13 The textbook acquaints the reader with the architecture of receivers of analog and digital radio systems helps to study the stages of designing a modern radio receiver and reveals the reasons and methods for its effective operation in networks for various purposes. Particular attention is paid to the methods of generating and processing signals in the receivers of digital systems with multiple access which make it possible to provide data transfer rates close to the maximum possible according to Shannon. As a textbook for students studying methods of optimal signal reception the book will also be useful to specialists in the field of telecommunications involved in the development of radio receivers. The book shows how the development of theoretical circuitry and integrated technologies led to the active introduction of algorithmic methods for signal processing changed both the design of receivers and the methods of forming the information flow in free space MIMO beamforming. The creation of a global 5G network based on heterogeneous networks puts forward new requirements for the architecture of receivers which are determined by the requirements to achieve high data rates low time delays or use in networks with coordinated multipoint transmission and reception CoMP. To consolidate the knowledge gained the book includes a complete set of materials for online classes including questions and answers a guide to solving problems for each chapter and computer modeling units of receivers in the MicroCAP environment based on preliminary calculations.
