Mode Mode Mode:

Mixed-Mode Official Surveys Barry Schouten, Jan van den Brakel, Bart Buelens, Deirdre Giesen, Annemieke Luiten, Vivian Meertens, 2021-09-27 Mixed mode surveys have become a standard at many statistical institutes. However, the introduction of multiple modes in one design goes with challenges to both methodology and logistics. Mode specific representation and measurement differences become explicit and demand for solutions in data collection design, questionnaire design and estimation. This is especially true when surveys are repeated and are input to long time series of official statistics. So how can statistical institutes deal with such changes? What are the origins of mode specific error? And how can they be dealt with? In this book, the authors provide answers to these questions and much more. Features: Concise introduction to all the key elements of mixed mode survey design and analysis. Realistic official statistics examples from three general population surveys. Suitable for survey managers and survey statisticians alike. An overview of mode specific representation and measurement errors and how to avoid, reduce and adjust them.

Spatio-Temporal Modeling and Device Optimization of Passively Mode-Locked Semiconductor Lasers Stefan Meinecke, 2022-03-26 This thesis investigates passively mode locked semiconductor lasers by numerical methods. The understanding and optimization of such devices is crucial to the advancement of technologies such as optical data communication and dual comb spectroscopy. The focus of the thesis is therefore on the development of efficient numerical models which are able both to perform larger parameter studies and to provide quantitative predictions. Along with that, visualization and evaluation techniques for the rich spatio-temporal laser dynamics are developed. These facilitate the physical interpretation of the observed features. The investigations in this thesis revolve around two specific semiconductor devices, namely a monolithically integrated three section tapered quantum dot laser and a V shaped external cavity laser. In both cases, the simulations closely tie in with experimental results which have been obtained in collaboration with the TU Darmstadt and the ETH Zurich. Based on the successful numerical reproduction of the experimental findings, the emission dynamics of both lasers can be understood in terms of the cavity geometry and the active medium dynamics. The latter, in particular, highlights the value of the developed simulation tools since the fast charge carrier dynamics are generally not experimentally accessible during mode locking operation. Lastly, the numerical models are used to perform laser design explorations and thus to derive recommendations for further optimizations.

Dynamic Mode Decomposition J. Nathan Kutz, Steven L. Brunton, Bingni W. Brunton, Joshua L. Proctor, 2016-11-23 Data driven dynamical systems is a burgeoning field. It connects how measurements of nonlinear dynamical systems and/or complex systems can be used with well established methods in dynamical systems theory. This is a critically important new direction because the governing equations of many problems under consideration by practitioners in various scientific fields are not typically known. Thus, using data alone to help derive in an optimal sense the best dynamical system representation of a given application allows for important new insights. The recently developed dynamic mode decomposition (DMD) is an innovative tool

for integrating data with dynamical systems theory The DMD has deep connections with traditional dynamical systems theory and many recent innovations in compressed sensing and machine learning Dynamic Mode Decomposition Data Driven Modeling of Complex Systems the first book to address the DMD algorithm presents a pedagogical and comprehensive approach to all aspects of DMD currently developed or under development blends theoretical development example codes and applications to showcase the theory and its many innovations and uses highlights the numerous innovations around the DMD algorithm and demonstrates its efficacy using example problems from engineering and the physical and biological sciences and provides extensive MATLAB code data for intuitive examples of key methods and graphical presentations

Millimeter-Wave Radio-over-Fiber Links based on Mode-Locked Laser Diodes Brendel, Friederike, 2014-05-14 Radio communications in the range of 60 GHz enable multi Gigabit s network access in indoor environments Due to the propagation characteristics of such signals only very short range radio transmission is feasible In order to distribute these signals across large distances analog transmission over optical fiber is considered In this work mode locked laser diodes serve as optoelectronic oscillators for the generation of such signals Their system relevant properties are studied in detail **Modes of Perceiving and Processing Information** H.
