Mathematical Modelling with Case Studies B. Barnes,G..R. Fulford,2011-03-23 Focusing on growth and decay processes interacting populations and heating cooling problems Mathematical Modelling with Case Studies A Differential Equations Approach using Maple and MATLAB Second Edition presents mathematical techniques applicable to models involving differential equations that describe rates of change Although the authors **Innovation Diffusion Models** Mariangela Guidolin,2023-09-18 Innovation Diffusion Models Understand innovation diffusion models and their role in business success Innovation diffusion models are statistical models that predict the medium and long term sales performance of new products on a market They account for numerous factors that contribute to the life cycle of a new product and are subject to continuous reassessment as markets transform and the business world becomes more complex In a modern market environment where product life cycles are becoming ever shorter the latest innovation diffusion models are essential for businesses looking to perfect their decision making processes Innovation Diffusion Models Theory and Practice provides a comprehensive and up to date guide to these models and their potential to impact product development It focuses on the latest product diffusion models which combine time series analysis with nonlinear regression techniques to create increasingly refined predictions Its combination of mathematical theory and business practice makes it an indispensable tool across many sectors of industry and commerce Innovation Diffusion Models readers will also find Real world examples demonstrating the kinds of data sets generated by new product growth models and their potential applications Discussion of the factors underlying the decision to select a given growth model for a particular product Clear detailed explanation of each model s explanatory ability Innovation Diffusion Models is an essential volume for practitioners in any field of industry or commerce as well as for graduate students and researchers in business and finance *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1965 *Perplexing Problems in Probability* Maury Bramson,Richard T. Durrett,2012-12-06 Harry Kesten has had a profound influence on probability theory for over 30 years To honour his achievements a number of prominent probabilists have written survey articles on a wide variety of active areas of contemporary probability many of which are closely related to Kesten s work **The Wulff Crystal in Ising and Percolation Models** Raphaël Cerf,2006-08-29 This volume is a synopsis of recent works aiming at a mathematically rigorous justification of the phase coexistence phenomenon starting from a microscopic model It is intended to be self contained Those proofs that can be found only in research papers have been included whereas results for which the proofs can be found in classical textbooks are only quoted **Game-Theoretical Models in Biology** Mark Broom,Jan Rychtar,2013-03-27 Covering the major topics of evolutionary game theory Game Theoretical Models in Biology presents both abstract and practical mathematical models of real biological situations It discusses the static aspects of game theory in a mathematically

rigorous way that is appealing to mathematicians In addition the authors explore many applications of game theory to biology making the text useful to biologists as well The book describes a wide range of topics in evolutionary games including matrix games replicator dynamics the hawk dove game and the prisoner s dilemma It covers the evolutionarily stable strategy a key concept in biological games and offers in depth details of the mathematical models Most chapters illustrate how to use MATLAB to solve various games Important biological phenomena such as the sex ratio of so many species being close to a half the evolution of cooperative behavior and the existence of adornments for example the peacock s tail have been explained using ideas underpinned by game theoretical modeling Suitable for readers studying and working at the interface of mathematics and the life sciences this book shows how evolutionary game theory is used in the modeling of these diverse biological phenomena

Individual-Based Models and Approaches In Ecology D. L. DeAngelis, 2018-01-18 Until fairly recently populations were handled as homogenized averages which made modeling feasible but which ignored the essential fact that in any population there is a great variety of individuals of different ages sizes and degrees of fitness Recently because of the increased availability of affordable computer power approaches have been developed which are able to recognize individual differences Individual based models are of great use in the areas of aquatic ecology terrestrial ecology landscape or physiological ecology terrestrial ecology landscape or physiological ecology and agriculture This book discusses which biological problems individual based models can solve as well as the models inherent limitations It explores likely future directions of theoretical development in these models as well as currently feasible management applications and the best mathematical approaches and computer languages to use The book also details specific applications to theory and management

Introduction to Mathematical Oncology Yang Kuang, John D. Nagy, Steffen E. Eikenberry, 2018-09-03 Introduction to Mathematical Oncology presents biologically well motivated and mathematically tractable models that facilitate both a deep understanding of cancer biology and better cancer treatment designs It covers the medical and biological background of the diseases modeling issues and existing methods and their limitations The authors introduce mathematical and programming tools along with analytical and numerical studies of the models They also develop new mathematical tools and look to future improvements on dynamical models After introducing the general theory of medicine and exploring how mathematics can be essential in its understanding the text describes well known practical and insightful mathematical models of avascular tumor growth and mathematically tractable treatment models based on ordinary differential equations It continues the topic of avascular tumor growth in the context of partial differential equation models by incorporating the spatial structure and physiological structure such as cell size The book then focuses on the recent active multi scale modeling efforts on prostate cancer growth and treatment dynamics It also examines more mechanistically formulated models including cell quota based population growth models with applications to real tumors and validation using clinical data The remainder of the text presents abundant additional historical biological and medical background materials

for advanced and specific treatment modeling efforts Extensively classroom tested in undergraduate and graduate courses this self contained book allows instructors to emphasize specific topics relevant to clinical cancer biology and treatment It can be used in a variety of ways including a single semester undergraduate course a more ambitious graduate course or a full year sequence on mathematical oncology The Analysis of Change John Mordechai Gottman,2013-02-01 Continuity and change have been major concerns of the social and behavioral sciences in the study of human development and in the study of processes that unfold in various ways across time There has been a veritable explosion of techniques for studying change over time which have fundamentally changed how we need to think of and study change Unfortunately many of the old precepts and beliefs are still among us The field of methodology for the study of change is itself ready to change Recently there have been many analytic and conceptual developments questioning our cherished beliefs about the study of change As such how are individuals to think about issues and correctly analyze change The chapters in this volume address these issues Divided into two sections this book deals with designs that analyze change in multiple subjects and with change in single subjects and an interacting system Papers presented in this volume are accessible to scientists who are not methodologists The character of the papers are more like primers than basic treatises on methodology written for other methodologists It is time that people stop thinking in rigid ways about how to study change and be introduced to a range of many possibilities Change stability order and chaos are elusive concepts The pursuit of the laws of change must be approached in as flexible and creative a fashion as possible This book should help to lead the way

Population Dynamics and the Tribolium Model: Genetics and Demography Robert F. Costantino,Robert A. Desharnais,2012-12-06 The study of populations is becoming increasingly focused on dynamics We believe there are two reasons for this trend The first is the impact of nonlinear dynamics with its exciting ideas and colorful language bifurcations domains of attraction chaos fractals strange attractors Complexity which is so very much a part of biology now seems to be also a part of mathematics A second trend is the accessibility of the new concepts The barriers to communication between theorist and experimentalist seem less impenetrable The active participation of the experimentalist means that the theory will obtain substance Our role is the application of the theory of dynamics to the analysis of biological populations We began our work early in 1979 by writing an ordinary differential equation for the rate of change in adult numbers which was based on an equilibrium model proposed a decade earlier During the next few months we filled our notebooks with straightforward deductions from the model and its associated biological implications Slowly some of the biological observations were explained and papers followed on a variety of topics genetic and demographic stability stationary probability distributions for population size population growth as a birth death process natural selection and density dependent population growth genetic disequilibrium and the stationary stochastic dynamics of adult numbers Encyclopedia of Ecology Brian D. volume provides the current understanding of death receptor s TLR3 signaling regulation in cancer Death receptors including TRAIL R1 TRAIL R2 Fas and TNF RI owing to their ability to trigger apoptosis and to contribute to the elimination of cancer cells by the immune system have been considered to variable extent as important therapeutic targets for cancer therapy But an increasing body of evidence suggests that some of these receptors may also contribute to tumorigenesis or that new players such as TLR3 may be targeted for cancer therapy due to their ability to behave like death receptors

Proceedings of the 45th Industrial Waste Conference May 1990, Purdue University John W. Community Ecology Gary G. Mittelbach, Brian J. McGill, 2019-05-24 Community ecology has undergone a transformation in recent years from a discipline largely focused on processes occurring within a local area to a discipline encompassing a much richer domain of study including the linkages between communities separated in space metacommunity dynamics niche and neutral theory the interplay between ecology and evolution eco evolutionary dynamics and the influence of historical and regional processes in shaping patterns of biodiversity To fully understand these new developments however students continue to need a strong foundation in the study of species interactions and how these interactions are assembled into food webs and other ecological networks This new edition fulfils the book's original aims both as a much needed up to date and accessible introduction to modern community ecology and in identifying the important questions that are yet to be answered This research driven textbook introduces state of the art community ecology to a new generation of students adopting reasoned and balanced perspectives on as yet unresolved issues Community Ecology is suitable for advanced undergraduates graduate students and researchers seeking a broad up to date coverage of ecological concepts at the community level
