**Coastal Zones Ecosystem Services** R. Kerry Turner, Marije Schaafsma, 2015-06-10 This book applies the ecosystem services framework to coastal environments showing how it could facilitate an adaptive management strategy The contributors describe a decision support system DSS based on the 3 Ps pluralism pragmatism and precaution that leads to a more flexible learn by doing approach to the stewardship of coastal environments The book lays out a Balance Sheets Approach to formatting interrogating and presenting data and findings The opening chapter defines coastal zones their characteristics and natural resources and describes their complex and dynamic nature The chapter shows that large scale trends and pressures have led to a global loss of 50% of marshes leading to significant declines in biodiversity and habitat Part I presents a conceptual framework describes natural science techniques for coastal and shelf modeling and describes valuation of ecosystem services Part II outlines practical ecosystem indicators for coastal and marine ecosystem services reviews literature on valuation of coastal and marine ecosystem services explores scenarios outlines marine and coastal ecosystem services data and offers tools for incorporating data into decision making PART III offers case studies including one linking the ecosystem services of Marine Protected Areas to benefits in human wellbeing and another on valuing blue carbon captured by oceans and coastal ecosystems Also included are a study of managed realignments and the English coastline and their value estimate transferability and studies of the impact of jellyfish blooms on recreation in the UK and on fisheries in Italy

**Modelling Global Change** Marco Janssen, 1998 Integrated assessment modelling is an active and rapidly developing field triggered by the debate on climate change and the move towards the goal of sustainable development This book provides an integrated approach to modelling using a transdisciplinary approach The author summarizes the main issues involved in the changing global system and gives an overview of the emerging field of integrated assessment He then presents a general discussion of the methodological principles of a multidisciplinary integrated modelling approach Existing tools are examined and new methodological approaches are applied to various aspects of the problem of global change The case studies focus on optimizing climate change mitigating policies the allocation of emission rights and the the adaptive behaviour of social and biological agents Special attention is given to the role of uncertainty especially the subjective interpretation of uncertainties world views and the role of adaptive multi agent modelling The book concludes with a discussion on future uses of integrated assessment modelling in the global environment Modelling Global Change will be vital to economists and scientists who have an interest in integrated assessment modelling global modelling and decision support environmental and ecological economists and those interested in sustainable development

*Climate Economics* Frank Ackerman, Elizabeth A. Stanton, 2013 Climate

science paints a bleak picture The continued growth of greenhouse gas emissions is increasingly likely to cause irreversible and catastrophic effects Urgent action is needed to prepare for the initial rounds of climatic change which are already unstoppable While the opportunity to avert all climate damage has now passed well designed mitigation and adaptation policies if adopted quickly could still greatly reduce the likelihood of the most tragic and far reaching impacts of climate change Climate economics is the bridge between science and policy translating scientific predictions about physical systems into projections about economic growth and human welfare that decision makers can most readily use but it has too often consisted of an overly technical academic approach to the problem Getting climate economics right is not about publishing the cleverest article of the year but rather about helping solve the dilemma of the century The tasks ahead are daunting and failure unfortunately is quite possible Better approaches to climate economics will allow economists to be part of the solution rather than part of the problem This book analyzes potential paths for improvement Climate Change ,1996
