Targeting Mathematics □ 6 Pearl Scott, Sheetal Chaudhery, Shanti Dhulia, Lata Thergaonkar, Targeting Mathematics series consists of nine textbooks one for Primer and eight textbooks for classes 1-8. These books have been formulated strictly in accordance with the Continuous and Comprehensive Evaluation (CCE) approach of Central Board of Secondary Education (CBSE) and are based on the latest syllabus. The series also conforms to the guidelines of National Curriculum Framework 2005. The books have been written by experienced and renowned authors. **Numbers and Computers** Ronald T.

Kneusel, 2017-02-09 This is a book about numbers and how those numbers are represented in and operated on by computers. It is crucial that developers understand this area because the numerical operations allowed by computers and the limitations of those operations especially in the area of floating point math affect virtually everything people try to do with computers. This book aims to fill this gap by exploring in sufficient but not overwhelming detail just what it is that computers do with numbers. Divided into two parts, the first deals with standard representations of integers and floating point numbers while the second examines several other number representations. Details are explained thoroughly with clarity and specificity. Each chapter ends with a summary, recommendations, carefully selected references, and exercises to review the key points. Topics covered include interval arithmetic, fixed point numbers, big integers, and rational arithmetic. This new edition has three new chapters: Pitfalls of Floating Point Numbers and How to Avoid Them, Arbitrary Precision Floating Point, and Other Number Systems. This book is for anyone who develops software, including software engineers, scientists, computer science students, engineering students, and anyone who programs for fun. **The Numbers Game** Michael Blastland, Andrew

Dilnot, 2008-12-26 The Strunk and White of statistics team up to help the average person navigate the numbers in the news. Drawing on their hugely popular BBC Radio 4 show *More or Less*, journalist Michael Blastland and internationally known economist Andrew Dilnot delight, amuse, and convert American mathphobes by showing how our everyday experiences make sense of numbers. The radical premise of *The Numbers Game* is to show how much we already know and give practical ways to use our knowledge to become canny consumers of the media. If you've ever wondered what average really means, whether the scare stories about cancer risk should convince you to change your behavior, or whether a story you read in the paper is biased, and how you need this book. Blastland and Dilnot show how to survive and thrive on the torrent of numbers that pours through everyday life. *To Better Know God* R. L. McCasland, 2000-08-08 Perhaps everyone who has ever considered the existence and the nature of God has struggled with various questions of faith. The author takes a contemplative look at certain questions commonly regarded and some questions which maybe are not so common and presents well thought out answers to each. These answers, while having been formulated in the cool precision and logic of the mathematical thought process, are supported by references from Scripture and by experiences in the author's past, including sermons preached by some of the finest ministers the church has to offer both in Texas and in Scotland. The reader should

Critical Philosophy of Mathematics Ole Skovsmose, 2024-09-25 This book provides a philosophy of mathematics that resonates with critical mathematics education It draws attention to the social complexities that characterise the period of Modernity including the extreme exploitation of manual workers and their families brutal forms of colonisations trading of slaves and the formation of racist ideologies It portrays Modernity as a period of contradictions and highlights that mathematics is a part of these contradictions The text interprets mathematics as being indefinite seeing that mathematics is a part of the ongoing human constructions It outlines a performative interpretation of mathematics portraying mathematics as intrinsically connected to actions Any kind of action including mathematics based actions calls for ethical considerations and this leads to any mathematical practice either in research application or education to face ethical challenges It illustrates with examples how a critical philosophy of mathematics can come to be an integral part of classroom practices
