Number and Pressure on the Afterbody of a Blunt-nosed Model in Free Flight at Mach Numbers from 6.5 to 14 Simon C. Sommer, 1960 **Effects of Numbers, Sizes and Crystal Structures on Measurements of Ice Hydrometeors** Robert O. Berthel, 1990 Simulated measurements of assumed ice hydrometeor environments generate number size distributions similar to those from in situ measurements even to the point of reproducing several inconsistencies often found in actual data This report describes the computer fabrication of ice hydrometeors composed of single columns and combinations of columns with random spatial orientation and the simulated measuring of those particles by PMS 1 D instruments Varying effects on distribution shapes are demonstrated by using different assumptions of particle number and sizes Efforts were concentrated on exploring the problems of deficient number counts in the first or first few classes of precipitation probe data non compatible number concentrations from the cloud and precipitation probes and the apparent existence of a few large particles that are not consistent with the rest of the distribution This investigation indicates that the numbers sizes crystalline structures and spatial positioning of hydrometeors may be the cause of these effects

Free-flight Measurements of Aerodynamic Heat Transfer to Mach Number 3.9 and of Drag to Mach Number 6.9 of a Fin-stabilized Cone-cylinder Configuration Charles B. Rumsey, 1955 Aerodynamic heat transfer measurements have been made at a station on the 10 degree total angle conical nose of a rocket propelled model at flight Mach numbers of 1.4 to 3.9 The corresponding values of local Reynolds number varied from 18 000 000 to 46 000 000 and the ratio of skin temperature to local static temperature varied from 1.2 to 2.4 The experimental data reduced to Stanton number were in fair agreement with values predicted by Van Driest's theory for heat transfer on a cone with turbulent flow from the nose tip

Nine Chapters on Mathematical Modernity Andrea Bréard, 2019-06-25 The book addresses for the first time the dynamics associated with the modernization of mathematics in China from the nineteenth to the mid twentieth century from a transcultural global historical perspective Rather than depict the transformations of mathematical knowledge in terms of a process of westernization the book analyzes the complex interactions between different scientific communities and the ways in which the past modernity language and mathematics were negotiated in a global context In each chapter Andrea Bréard provides vivid portraits of a series of go betweens such as translators educators or state statisticians based on a vast array of translated primary sources hitherto unavailable to a non Chinese readership They not only illustrate how Chinese scholars mediated between new mathematical objects and discursive modes but also how they instrumentalized their autochthonous scientific roots in specific political and intellectual contexts While sometimes technical in style the book addresses all readers who are interested in the global and cultural history of science and the complexities involved in the making of universal mathematics While the pursuit of modernity is in the title entanglement is of as much interest Using the famous *Nine Chapters* as a framework Bréard considers a wide range of that entanglement from divination to data management Bréard's analysis and thought provoking insights show once again how much we can learn when two cultures intersect A fascinating read John Day Boston University

Girls Have Academic Advantages and So Do Boys Jodie Fonseca, Laiba Bahrawar, Margaret M. Dubeck, Yasmin Sitabkhan, Christopher Cummiskey, Devanshi Unadkat, 2023-05-15 This paper contains a new analysis of gender differences in early grade reading and mathematics outcomes in 19 USAID funded studies over the past decade from 14 locations in Africa Asia Latin America and the Middle East The paper addresses gaps in the literature related to learning patterns for girls and boys in lower and middle income countries and in early primary school We analyzed the results from reading and mathematics assessments in grades 2 and 3 including differences in oral reading fluency ORF and quantitative comparison scores between boys and girls as well as differences in score distributions by gender In line with results from assessments in upper grades and in wealthier countries we found that girls consistently outperformed boys in reading In mathematics boys slightly outperformed girls although the differences were typically not large Global experience has shown that patterns in poor performance become more entrenched the further learners progress through the grades suggesting that early interventions for boys in reading and girls in mathematics could have long term benefits At the same time both girls and boys typically score below expectations in the two subjects across countries necessitating targeted strategies to improve outcomes for both genders early in their educational trajectories *Official*

Figures of Thought

David Reed,2003-09-02 Rarely has the history or philosophy of mathematics been written about by mathematicians and the analysis of mathematical texts themselves has been an area almost entirely unexplored Figures of Thought looks at ways in which mathematical works can be read as texts examines their textual strategies and demonstrates that such readings provide a rich source of philosophical issues regarding mathematics issues which traditional approaches to the history and philosophy of mathematics have neglected David Reed a professional mathematician himself offers the first sustained and critical attempt to find a consistent argument or narrative thread in mathematical texts In doing so he develops new and fascinating interpretations of mathematicians work throughout history from an in depth analysis of Euclid s Elements to the mathematics of Descartes and right up to the work of contemporary mathematicians such as Grothendieck He also traces the implications of this approach to the understanding of the history and development of mathematics

Evaluating

Measurement Accuracy Semyon G. Rabinovich,2009-12-11 Evaluating Measurement Accuracy is intended for anyone who is concerned with measurements in any field of science or technology It reflects the latest developments in metrology and offers new results but is designed to be accessible to readers at different levels meteorologists engineers and experimental scientists who use measurements as tools in their professions graduate and undergraduate students in the natural sciences and engineering and technicians performing complex measurements in industry quality control and trade The material of the book is presented from the practical perspective and offers solutions and recommendations for problems that arise in conducting real life measurements This inclusion is a notable and unique aspect of this title as complex measurements done in industry and trade are often neglected in metrological literature leaving the practitioners of these measurements to devise their own ad hoc techniques
