Mathematics of Oil Recovery Dominique Guerillot, D. Guérillot, Olivier Guillon, 1990-12 **Numerical Simulation in Oil Recovery** Mary Fanett Wheeler, 1988 The papers of this book are based on a Symposium on Numerical Simulation in Oil Recovery held at the Institute for Mathematics and its Applications The major research emphasis is on the modeling of fractures heterogeneities viscous fingering and diffusion dispersion effects in the flow in porous media This volume contains seventeen comprehensive papers on the latest developments in this exciting subject Its diverse presentation brings together the various disciplines of applied mathematics chemical engineering physics and hydrology *Flow Control* Max D. Gunzburger, 2012-12-06 The articles in this volume cover recent work in the area of flow control from the point of view of both engineers and mathematicians These writings are especially timely as they coincide with the emergence of the role of mathematics and systematic engineering analysis in flow control and optimization Recently this role has significantly expanded to the point where now sophisticated mathematical and computational tools are being increasingly applied to the control and optimization of fluid flows These articles document some important work that has gone on to influence the practical everyday design of flows moreover they represent the state of the art in the formulation analysis and computation of flow control problems This volume will be of interest to both applied mathematicians and to engineers **Mathematics in Industrial Problems** Avner Friedman, 2012-12-06 Building a bridge between mathematicians and industry is both a challenging task and a valuable goal for the Institute for Mathematics and its Applications IMA The rationale for the existence of the IMA is to encourage interaction between mathematicians and scientists who use mathematics Some of this interaction should evolve around industrial problems which mathematicians may be able to solve in real time Both Industry and Mathematics benefit Industry by increase of mathematical knowledge and ideas brought to bear upon their concerns and Mathematics through the infusion of exciting new problems In the past ten months I have visited numerous industries and national laboratories and met with several hundred scientists to discuss mathematical questions which arise in specific industrial problems Many of the problems have special features which existing mathematical theories do not encompass such problems may open new directions for research However I have encountered a substantial number of problems to which mathematicians should be able to contribute by providing either rigorous proofs or formal arguments The majority of scientists with whom I met were engineers physicists chemists applied mathematicians and computer scientists I have found them eager to share their problems with the mathematical community Often their only recourse with a problem is to put it on the computer However further insight could be gained by mathematical analysis **Computation and Applied Mathematics**, 2002 **Fluid Flow and Transport in Porous Media, Mathematical and Numerical Treatment** Zhangxin Chen, Richard E. Ewing, 2002 The June 2001 conference brought together mathematicians computational scientists and engineers working on the mathematical and numerical treatment of fluid flow and transport in porous media This

collection of 43 papers from that conference reports on recent advances in network flow modeling parallel computation optimization upscaling uncertainty reduction media characterization and chemically reactive phenomena Topics include modeling horizontal wells using hybrid grids in reservoir simulation a high order Lagrangian scheme for flow through unsaturated porous media and a streamline front tracking method for two and three phase flow No index Annotation copyrighted by Book News Inc Portland OR

Hyperbolic Problems: Theory, Numerics, Applications Heinrich Freistühler, Gerald Warnecke, 2012-12-06 Hyperbolic partial differential equations describe phenomena of material or wave transport in physics biology and engineering especially in the field of fluid mechanics The mathematical theory of hyperbolic equations has recently made considerable progress Accurate and efficient numerical schemes for computation have been and are being further developed This two volume set of conference proceedings contains about 100 refereed and carefully selected papers The books are intended for researchers and graduate students in mathematics science and engineering interested in the most recent results in theory and practice of hyperbolic problems Applications touched in these proceedings concern one phase and multiphase fluid flow phase transitions shallow water dynamics elasticity extended thermodynamics electromagnetism classical and relativistic magnetohydrodynamics cosmology Contributions to the abstract theory of hyperbolic systems deal with viscous and relaxation approximations front tracking and wellposedness stability of shock profiles and multi shock patterns traveling fronts for transport equations Numerically oriented articles study finite difference finite volume and finite element schemes adaptive multiresolution and artificial dissipation methods

Arnold Director of the IMA Fadil Santosa Deputy Director of the IMA

PREFACE Advances in resource recovery and confinement remediation of environmental hazards requires a coordinated interdisciplinary effort involving mathematicians scientists and engineers The intent of this collection of papers is to summarize recent theoretical computational and experimental advances in the theory of phenomena in porous media with the intent to identify similarities and differences concerning applications related to both resource recovery and confinement and remediation of

environmental hazards

Mathematical Aspects of Scientific Software J.R. Rice, 2012-12-06 Since scientific software is the fuel that drives today's computers to solve a vast range of problems huge efforts are being put into the development of new software systems and algorithms for scientific problem solving This book explores how scientific software impacts the structure of mathematics how it creates new subfields and how new classes of mathematical problems arise The focus is on five topics where the impact is currently being felt and where important new challenges exist namely the new subfield of parallel and geometric computations the emergence of symbolic computation systems into general use the potential emergence of new high level mathematical systems and the crucial question of how to measure the performance of mathematical problem solving tools

Modeling Transport Phenomena in Porous Media with Applications Malay K. Das, Partha P. Mukherjee, K. Muralidhar, 2017-11-21 This book is an ensemble of six major chapters an introduction and a closure on modeling transport phenomena in porous media with applications Two of the six chapters explain the underlying theories whereas the rest focus on new applications Porous media transport is essentially a multi scale process Accordingly the related theory described in the second and third chapters covers both continuum and meso scale phenomena Examining the continuum formulation imparts rigor to the empirical porous media models while the mesoscopic model focuses on the physical processes within the pores Porous media models are discussed in the context of a few important engineering applications These include biomedical problems gas hydrate reservoirs regenerators and fuel cells The discussion reveals the strengths and weaknesses of existing models as well as future research directions

Statistical Thermodynamics and Differential Geometry of Microstructured Materials H. Ted Davis, Johannes C.C. Nitsche, 2012-12-06 Substances possessing heterogeneous microstructure on the nanometer and micron scales are scientifically fascinating and technologically useful Examples of such substances include liquid crystals microemulsions biological matter polymer mixtures and composites vycor glasses and zeolites In this volume an interdisciplinary group of researchers report their developments in this field Topics include statistical mechanical free energy theories which predict the appearance of various microstructures the topological and geometrical methods needed for a mathematical description of the subparts and dividing surfaces of heterogeneous materials and modern computer aided mathematical models and graphics for effective exposition of the salient features of microstructured materials

Computational Fluid Dynamics and Reacting Gas Flows Bjorn Engquist, Mitchell Luskin, Andrew Majda, 2012-12-06 This IMA Volume in Mathematics and its Applications COMPUTATIONAL FLUID DYNAMICS AND REACTING GAS FLOWS is in part the proceedings of a workshop which was an integral part of the 1986-87 IMA program on SCIENTIFIC COMPUTATION We are grateful to the Scientific Committee Bjorn Engquist Chairman Roland Glowinski Mitchell Luskin and Andrew Majda for planning and implementing an exciting and stimulating year long program We especially thank the Workshop Organizers Bjorn Engquist Mitchell Luskin and Andrew Majda for organizing a workshop which brought together many of the leading researchers in the area of computational fluid dynamics George R Sell

Hans Weinberger PREFACE Computational fluid dynamics has always been of central importance in scientific computing It is also a field which clearly displays the essential theme of interaction between mathematics physics and computer science Therefore it was natural for the first workshop of the 1986 87 program on scientific computing at the Institute for Mathematics and Its Applications to concentrate on computational fluid dynamics In the workshop more traditional fields were mixed with fields of emerging importance such as reacting gas flows and non Newtonian flows The workshop was marked by a high level of interaction and discussion among researchers representing varied schools of thought and countries

Homogenization and Porous Media Ulrich Hornung,2012-12-06 This book offers a systematic rigorous treatment of upscaling procedures related to physical modeling for porous media on micro meso and macro scales including detailed studies of micro structure systems and computational results for dual porosity models *Computation and Applied Mathematics* ,1998 Computer Aided Proofs in Analysis Kenneth R. Meyer,Dieter S. Schmidt,2012-12-06 This IMA Volume in Mathematics and its Applications COMPUTER AIDED PROOFS IN ANALYSIS is based on the proceedings of an IMA Participating Institutions PI Conference held at the University of Cincinnati in April 1989 Each year the 19 Participating Institutions select through a competitive process several conferences proposals from the PIs for partial funding This conference brought together leading figures in a number of fields who were interested in finding exact answers to problems in analysis through computer methods We thank Kenneth Meyer and Dieter Schmidt for organizing the meeting and editing the proceedings A vner Friedman Willard Miller Jr PREFACE Since the dawn of the computer revolution the vast majority of scientific compu tation has dealt with finding approximate solutions of equations However during this time there has been a small cadre seeking precise solutions of equations and rigorous proofs of mathematical results For example number theory and combina torics have a long history of computer assisted proofs such methods are now well established in these fields In analysis the use of computers to obtain exact results has been fragmented into several schools **Vadose Zone Hydrology**
