Numerical Analysis The Mathematics Of Computing Volume 2: Differential Equations for Studies in Computational Electrophysiology Karoline Horgmo Jæger,Aslak Tveito,2023-05-27 This open access text aims at giving you the simplest possible introduction to differential equations that are used in models of electrophysiology It covers models at several spatial and temporal scales with associated numerical methods The text demonstrates that a very limited number of fundamental techniques can be used to define numerical methods for equations ranging from ridiculously simple to extremely complex systems of partial differential equations Every method is implemented in Matlab and the codes are freely available online By using these codes the reader becomes familiar with classical models of electrophysiology like the cable equation the monodomain model and the bidomain model But modern models that have just started to gain attention in the field of computational electrophysiology are also presented If you just want to read one book it should probably not be this one but if you want a simple introduction to a complex field it is worth considering the present text **Numerical Recipes in FORTRAN 77: Volume 1, Volume 1 of Fortran Numerical Recipes** William H. Labovsky,2025-07-17 Defect Correction Methods for Fluid Flows at High Reynold s Numbers presents the mathematical development of defect correction methods DCM in application to fluid flow problems in various settings We will show several approaches to applying the DCM ideas in computational fluid dynamics CFD from a basic idea of controlling the flow by the means of increased diffusion to the state of the art family of novel DCM based turbulence models The main idea of the methods presented in this book is to use defect correction in turbulence modelling additionally several methods will also be presented that aim at reducing the time discretization error Features Provides a road map starting from the ideas of minimally invasive controlling of turbulent flows to the ways of improving the existing regularization techniques with DCM to the ideas of full defect correction in both space and time and finally to the more complex embedding of the DCM into turbulence modelling by the correction of the whole turbulence model Can be used for teaching a topics course on a Masters or Ph D level It is even more suitable as a reference for CFD theorists and practitioners with most of the methods being minimally invasive and therefore easy to implement in the existing legacy codes Discusses the current challenges in turbulence modelling with defect correction showing several possible directions for future developments Two source codes are provided one for a regularization technique and another for a novel turbulence model in order to give an interested
