Numerische Methoden Der Analysis:

Analytical Methods for Heat Transfer and Fluid Flow Problems Bernhard Weigand, 2015-05-05 This book describes useful analytical methods by applying them to real world problems rather than solving the usual over simplified classroom problems The book demonstrates the applicability of analytical methods even for complex problems and guides the reader to a more intuitive understanding of approaches and solutions Although the solution of Partial Differential Equations by numerical methods is the standard practice in industries analytical methods are still important for the critical assessment of results derived from advanced computer simulations and the improvement of the underlying numerical techniques Literature devoted to analytical methods however often focuses on theoretical and mathematical aspects and is therefore useless to most engineers Analytical Methods for Heat Transfer and Fluid Flow Problems addresses engineers and engineering students The second edition has been updated the chapters on non linear problems and on axial heat conduction problems were extended And worked out examples were included

Numerical Algorithms with C Giesela Engeln-Müllges, Frank Uhlig, 2013-11-21 More scientists now use C than any other programming language This book contains practical computer ready algorithms for many standard methods of numerical mathematics It describes the principles of the various methods and provides support in choosing the appropriate method for a given task Topics given special emphasis include converging methods for solving nonlinear equations methods for solving systems of linear equations for many special matrix structures and the Shepard method for multidimensional interpolation The CD contains C programs for almost all the algorithms given in the book and a compiler together with software for graphical printing

Glocalized Solutions for Sustainability in Manufacturing Jürgen Hesselbach, Christoph Herrmann, 2011-03-19 The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 continues a long tradition of scientific meetings focusing on the exchange of industrial and academic knowledge and experiences in life cycle assessment product development sustainable manufacturing and end of life management The theme Glocalized Solutions for Sustainability in Manufacturing addresses the need for

engineers to develop solutions which have the potential to address global challenges by providing products services and processes taking into account local capabilities and constraints to achieve an economically socially and environmentally sustainable society in a global perspective Globalized Solutions for Sustainability in Manufacturing do not only involve products or services that are changed for a local market by simple substitution or the omitting of functions Products and services need to be addressed that ensure a high standard of living everywhere Resources required for manufacturing and use of such products are limited and not evenly distributed in the world Locally available resources local capabilities as well as local constraints have to be drivers for product and process innovations with respect to the entire life cycle The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas

Practical Handbook of Material Flow Analysis Paul H. Brunner, Helmut Rechberger, 2016-04-19 The first ever book on this subject establishes a rigid transparent and useful methodology for investigating the material metabolism of anthropogenic systems Using Material Flow Analysis MFA the main sources flows stocks and emissions of man made and natural materials can be determined By demonstrating the application of MFA this book reveals how resources can be conserved and the environment protected within complex systems The fourteen case studies presented exemplify the potential for MFA to contribute to sustainable materials management

Exercises throughout the book deepen comprehension and expertise The authors have had success in applying MFA to various fields and now promote the use of MFA so that future engineers and planners have a common method for solving resource oriented problems *Data Analysis in High Energy Physics* Olaf Behnke, Kevin Kröninger, Grégory Schott, Thomas Schörner-Sadenius, 2013-08-30 This practical guide covers the essential tasks in statistical data analysis encountered in high energy physics and provides comprehensive advice for typical questions and problems The basic methods for inferring results from data are presented as well as tools for advanced tasks such as improving the signal to background ratio correcting detector effects determining systematics and many others Concrete applications are discussed in analysis walkthroughs Each chapter is supplemented by numerous examples and exercises and by a list of literature and relevant links The book targets a broad readership at all career levels from students to senior researchers An accompanying website provides more algorithms as well as up to date information and links Free solutions manual available for lecturers at www.wiley-vch.de/supplements
