Nutrient Requirements Of Beef Cattle:

Nutrient Requirements of Beef Cattle National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on Nutrient Requirements of Beef Cattle, 2016-06-16

Since 1944 the National Research Council NRC has published seven editions of the *Nutrient Requirements of Beef Cattle*. This reference has guided nutritionists and other professionals in academia and the cattle and feed industries in developing and implementing nutritional and feeding programs for beef cattle. The cattle industry has undergone considerable changes since the seventh revised edition was published in 2000 and some of the requirements and recommendations set forth at that time are no longer relevant or appropriate. The eighth revised edition of the *Nutrient Requirements of Beef Cattle* builds on the previous editions. A great deal of new research has been published during the past 14 years and there is a large amount of new information for many nutrients. In addition to a thorough and current evaluation of the literature on the energy and nutrient requirements of beef in all stages of life, this volume includes new information about phosphorus and sulfur contents, a review of nutritional and feeding strategies to minimize nutrient losses in manure and reduce greenhouse gas production, a discussion of the effect of feeding on the nutritional quality and food safety of beef, new information about nutrient metabolism and utilization, new information on feed additives that alter rumen metabolism and postabsorptive metabolism, and future areas of needed research. The tables of feed ingredient composition are significantly updated. *Nutrient Requirements of Beef Cattle* represents a comprehensive review of the most recent information available on beef cattle nutrition and ingredient composition that will allow efficient, profitable, and environmentally conscious beef production.
