Resources, Committee on Biological Confinement of Genetically Engineered Organisms, 2004-02-20 Genetically engineered organisms GEOs have been under development for more than 20 years while GE crops have been grown commercially during the last decade During this time a number of questions have cropped up concerning the potential consequences that certain GEOs might have on natural or managed ecosystems and human health Interest in developing methods to confine some GEOs and their transgenes to specifically designated release settings has increased and the success of these efforts could facilitate the continued growth and development of this technology Biological Confinement of Genetically Engineered Organisms examines biological methods that may be used with genetically engineered plants animals microbes and fungi Bioconfinement methods have been applied successfully to a few non engineered organisms but many promising techniques remain in the conceptual and experimental stages of development This book reviews and evaluates these methods discusses when and why to consider their use and assesses how effectively they offer a significant reduction of the risks engineered organisms can present to the environment Interdisciplinary research to develop new confinement methods could find ways to minimize the potential for unintended effects on human health and the environment Need for this type of research is clear and successful methods could prove helpful in promoting regulatory approval for commercialization of future genetically engineered organisms

California Agricultural Research Priorities National Research Council,Division on Earth and Life Studies,Board on Agriculture and Natural Resources,Committee on California Agricultural Research Priorities: Pierce's Disease,2004-10-28

The glassy winged sharpshooter is one of the more recent invasive pests to afflict California agriculture The insect transmits a bacterial pathogen that causes Pierce s disease which has impaired production of wine table and raisin grapes in California

The report recommends strengthening the process and the priorities for research funded by state agencies and wine industry groups to address Pierce's disease and its vector. Research should be focused on identifying feasible options for controlling the spread of the disease and providing sustainable approaches that are adaptable and affordable over the long term. Several avenues of research be pursued more intensely including the genetic makeup of the pathogen that triggers Pierce's disease, understanding the mechanisms that make grapes resistant to the disease, the possibilities of introducing predator enemies to the sharpshooter and new ways to manage the planting of crops to help avoid spread of the disease.

Animal Care and Management at the National Zoo National Research Council, Division on Earth and Life Studies, Institute for Laboratory Animal Research, Board on Agriculture and Natural Resources, Committee on the Review of the Smithsonian Institution's National Zoological Park, 2005-11-27. This report follows up on an interim report released in February 2004 that focused on immediate needs in the areas of animal care and management, recordkeeping and pest control. The report finds that the zoo has made good faith efforts to correct deficiencies noted in the interim report and has made some noticeable improvements in the past year in zoo operations and animal care. However, problems in areas such as staff training, workplace culture and strategic planning still need to be addressed. Specifically, the report recommends that the zoo immediately develop and implement animal care training programs to ensure that people who are directly responsible for the well being of its animal collection are adequately prepared and competent. The report commends a zoo-initiated strategic planning process as a positive step but recommends it contain a more detailed comprehensive strategy of how it will meet short-term goals and that it should link plans to upgrade facilities with those to acquire animals. The zoo should also focus on improving communication among keepers, veterinarians, nutritionists, senior managers and curators.

Ecologically Based Pest Management National Research Council, Board on Agriculture, Committee on Pest and Pathogen Control Through Management of Biological Control Agents and Enhanced Cycles and Natural Processes, 1996-03-21. Widespread use of broad spectrum chemical pesticides has revolutionized pest management. But there is growing concern about environmental contamination and human health risks and continuing frustration over the ability of pests to develop resistance to pesticides. In *Ecologically Based Pest Management*, an expert committee advocates the sweeping adoption of ecologically based pest management (EBPM) that promotes both agricultural productivity and a balanced ecosystem. This volume offers a vision and strategies for creating a solid comprehensive knowledge base to support a pest management system that incorporates ecosystem processes supplemented by a continuum of inputs: biological organisms, products, cultivars and cultural controls. The result will be safe, profitable and durable pest management strategies. The book evaluates the feasibility of EBPM and examines how best to move beyond optimal examples into the mainstream of agriculture. The committee stresses the need for information, identifies research priorities in the biological as well as socioeconomic realm and suggests institutional structures for a multidisciplinary research effort. *Ecologically Based Pest Management* addresses risk assessment, risk management and

public oversight of EBPM The volume also overviews the history of pest management from the use of sulfur compounds in 1000 B C to the emergence of transgenic technology Ecologically Based Pest Management will be vitally important to the agrichemical industry policymakers regulators and scientists in agriculture and forestry biologists researchers and environmental advocates and interested growers **Agriculture in Transition** ,1987 Introduction to Animal Science Wilson G. Pond, Kevin R. Pond, 2000-02-11 Pond is for the mainstream introduction to animal science taught in every university that has a school of agriculture or animal science department The result of years of teaching the book provides students with a comprehensive and balanced overview of animal agriculture in contemporary society taking into account the needs of students with highly varied cultural backgrounds and educational objectives *Air Emissions from Animal Feeding Operations* National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Board on Agriculture and Natural Resources, Committee on Animal Nutrition, Ad Hoc Committee on Air Emissions from Animal Feeding Operations, 2003-04-07 Air Emissions from Animal Feeding Operations Current Knowledge Future Needs discusses the need for the U S Environmental Protection Agency to implement a new method for estimating the amount of ammonia nitrous oxide methane and other pollutants emitted from livestock and poultry farms and for determining how these emissions are dispersed in the atmosphere The committee calls for the EPA and the U S Department of Agriculture to establish a joint council to coordinate and oversee short and long term research to estimate emissions from animal feeding operations accurately and to develop mitigation strategies Their recommendation was for the joint council to focus its efforts first on those pollutants that pose the greatest risk to the environment and public health *Diagnosis and Control of Johne's Disease* National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on Diagnosis and Control of Johne's Disease, 2003-09-13 Johne s Disease is a chronic progressive intestinal disease caused by infection with Mycobacterium avium subspecies paratuberculosis Map that affects primarily ruminant animals In recent decades there has been growing concern over the lack of effective control of this disease and questions have arisen regarding the possibility that Map infection could be a cause of some cases of Crohn s disease in humans This report presents a broad outline of the steps that should be taken to control Johne s disease reduce the spread of Map and minimize effects of the disease in animals The report also describes the weaknesses of our current research agenda and provides recommendations for a new research strategy to resolve the question of whether there is a link between Johne s and Crohn s diseases
