

STROKE

A stroke aka. cerebrovascular attack is the loss of brain function due to a disturbance in the blood supply to the brain.

❗ Stroke is the fourth leading cause of death in the United States. ❗

On average, one American dies from stroke every 4 minutes.

Stroke is a leading cause of serious long-term disability.

In 2009, 34% of people hospitalized for stroke were younger than 65 years.

Stroke kills almost 130,000 Americans each year (1 out of every 19 deaths)

Ischemic stroke

— blood supply to part of the brain is decreased, leading to dysfunction of the brain tissue in that area. There are four reasons why this might happen:

1. Thrombosis (obstruction of a blood vessel by a blood clot forming locally)
2. Embolism (obstruction due to an embolus from elsewhere in the body, see below)
3. Systemic hypoperfusion (general decrease in blood supply, e.g., in shock)
4. Venous thrombosis.

❗ About 87% of all strokes are ischemic strokes.

Hemorrhagic stroke

Intracranial hemorrhage is the accumulation of blood anywhere within the skull vault. A distinction is made between intra-axial hemorrhage (blood inside the brain) and extra-axial hemorrhage (blood inside the skull but outside the brain).

Nutrition And Stroke:

Handbook of Clinical Nutrition and Stroke Mandy L. Corrigan, Arlene A. Escuro, Donald F. Kirby, 2013-04-17

Handbook of Clinical Nutrition and Stroke is a comprehensive reference on nutrition for the multidisciplinary team caring for stroke patients. Targeting physicians, nurse practitioners, clinical dietitians, and advanced allied health and medical students, this volume provides an introduction on the different types of stroke, associated risk factors, and uniquely featured global perspectives on stroke. In addition to discussing stroke risk factors, the book expands upon treatment and management from the acute care setting through rehabilitation, capturing the lifespan of patients affected by stroke and discussing the progression of the nutrition care plan. Containing the most up-to-date evidence-based information currently available, Handbook of Clinical Nutrition and Stroke is a valuable resource for clinicians working with the stroke population.

Nutrition and Stroke Wael Mohamed, Mohd Basri Mat-Nor, 2024-12-27 This book provides a thorough examination of the correlation between nutrition and stroke. It delves into the interplay between nutrition and brain functions, neurogenesis, and cognitive functions. Additionally, it investigates how various types of nutrition relate to stroke. Moreover, it discusses recent progress in recognizing the significant therapeutic role of different nutrients in addressing stroke. Finally, it offers an overview of nutrients as neuroprotective agents and outlines the fundamental principles of nutrigenomics.

Nutrition and Stroke Salah Gariballa, 2008-04-15 Stroke is a common and devastating event which often results in death or major loss of independence with immense human and financial costs. In the developed world, stroke accounts for around 10 per cent of all deaths and is the most important single cause of severe disability among western people living in their own homes. Furthermore, in the next 30 years, the burden of stroke will grow substantially in most developing nations. There is now substantial evidence that dietary habits not only influence the prevalence of stroke but also its course and outcome once it has occurred. The author, Salah Gariballa, who has many years experience working in this area, carefully presents and reviews this information in a user-friendly and accessible manner. The book is divided into three major sections. Section I covers nutrition and ageing and includes chapters on the challenge of stroke, ageing changes, and nutrition; macro and micronutrient intake in elderly people; and the diagnosis of protein-energy undernutrition. Section II deals with nutritional factors and the risk of stroke and includes details of the role of dietary and nutritional factors in stroke prevention: antioxidants and risk from ischaemic stroke; homocysteine and endothelial dysfunction. The final section of the book covers nutrition factors following stroke, including cerebral ischaemia, protein-energy undernutrition, and the nutritional status and support of stroke and special stroke patients. A final chapter looks at probable future directions, including important recommendations. Nutrition and stroke is essential reading for nutritionists, dietitians, and many other groups of health professionals, including general practitioners, gerontologists, occupational therapists, and nursing staff. Personnel in pharmaceutical and food companies involved in the formulation of dietary supplements and nutraceuticals will find much of interest within the book.
