Nutritional Biochemistry of the Vitamins David A. Bender,2003-09-18 The vitamins are a chemically disparate group of compounds whose only common feature is that they are dietary essentials that are required in small amounts for the normal functioning of the body and maintenance of metabolic integrity Metabolically they have diverse function as coenzymes hormones antioxidants mediators of cell signaling and regulators of cell and tissue growth and differentiation This book explores the known biochemical functions of the vitamins the extent to which we can explain the effects of deficiency or excess and the scientific basis for reference intakes for the prevention of deficiency and promotion of optimum health and well being It also highlights areas where our knowledge is lacking and further research is required It provides a compact and authoritative reference volume of value to students and specialists alike in the field of nutritional biochemistry and indeed all

who are concerned with vitamin nutrition deficiency and metabolism Gut Flora, Nutrition, Immunity and Health Roy Fuller, Gabriela Peridigón, 2008-04-15 Some foods as well as contributing essential nutrients to the body also contain additional components that improve disease resistance and general health status over and above that induced by ingestion of conventional foods The so called functional foods and prebiotics and probiotics exemplify the relationship that exists between nutrition the gut the largest element of the body's immune system and its flora immunology and health This important book contains chapters covering the basic principles of nutrition gut microecology and immunology as well as chapters which discuss the way in which this knowledge may be used to explain the positive and negative effects of food consumption metabolism probiotics and prebiotics Food hypersensitivity and allergic reactions carcinogenesis and the role of nutrition in the reduced immunity of the aged are also discussed in detail The editors of this exciting and informative book who between them have a vast wealth of knowledge of the area have drawn together and carefully edited international contributions from many well known and respected workers in the area Gut Flora Nutrition Immunity and Health provides essential information for a range of professionals including nutritionists dietitians food scientists microbiologists gastroenterologists immunologists and all personnel working in the development and use of functional foods and supplements prebiotics and probiotics Libraries in universities and research establishments where these subjects are studied and taught and pharmaceutical and food companies should have multiple copies of this very useful book on their shelves Roy Fuller is a consultant in gut microecology based in Reading UK Gabriela Perdigón is based at the Centro de Referencia para Lactobacillus CERELA and at the Faculty of Biochemistry Chemistry and Pharmacy of Tucuman University Argentina

Nutrition Geoffrey P. Webb, 2019-11-04 Following the tradition of its predecessor the fifth edition of Nutrition Maintaining and Improving Health continues to offer a wide ranging coverage of all aspects of nutrition while providing new information to this edition including Increased coverage of experimental and observational methods used in nutrition In depth focus on the nutritional implications of the increased adoption of vegetarian and vegan lifestyles Streamlined referencing a short selected list of key references at the end of each chapter with URL links to free additional resources where possible Discussion of nutrition debates Critical coverage of medicinal uses of food including superfoods functional foods and dietary supplements Updated bullet point summaries of key points after each major topic within each chapter The author provides an evidence based evaluation of many key nutrition beliefs and philosophies The book contains in depth and critical reviews of the methods used to evaluate nutritional intakes status and the observational and experimental used to investigate putative links between dietary factors and health outcome It covers the role of food as a source of energy and nutrients while discussing the non nutritional roles of food and the social and psychological factors that influence food choice Presenting a critical discussion on the value of nutrition research linking specific foods or nutrients to specific diseases which encourages students to question the value of some current nutrition research This is essential reading for all nutrition and
