The influence of maternal, fetal and child nutrition on the development of chronic disease in later life Scientific Advisory Committee on Nutrition,2011-06-23 In this final report on the The influence of maternal fetal and child nutrition on the development of chronic disease in later life the Subgroup on Maternal and Child Nutrition SMCN reviews the evidence that early life nutrition exerts long term effects and influences the risk of chronic disease in adulthood bringing together findings from both observational and experimental studies and considering implications for maternal and child nutrition in the UK SACN concludes that there is cause for concern about the later health consequences of compromised or excessive nutrient supply during early fetal and infant life It notes that in the context of reproduction the impact of current dietary patterns on women and girls is of particular concern and considers that improving the nutritional status of women of childbearing age infants and young children has the potential to improve the health of future generations The Committee also offers recommendations for future research in this area particularly emphasising the need for data which better characterise dietary patterns and patterns of pre and postnatal growth

Perinatal Nutrition Jatinder Bhatia,2004-12-27 Perinatal Nutrition describes the role of nutrition in newborn growth and development the reduction of health risks and the prevention of morbidity in the neonatal period and infancy This important reference presents valuable nutritional strategies for the care of perinatal patients from preconception through infancy and after hospital release

Endocrine and Metabolic Effects on Maternal-fetal and Neonatal Outcomes, Volume II Huixia Yang,Moshe Hod,Cuilin Zhang,Jie Yan,Chen Wang,2024-09-20 Given the success of Research Topic Endocrine and Metabolic Effects on Maternal fetal and Neonatal Outcomes and the rapidly evolving subject area we are pleased to announce the launch of Volume II Pregnancy is a complex state with many endocrine and metabolic challenges to a woman s physiology

Inappropriate maternal endocrine and metabolic changes such as obesity hyperglycemia hyperlipidemia and hypothyroidism may lead to short term and long term complications in the mother and offspring This not only affects population health but also imposes a huge social and economic burden accompanied by significant direct and indirect public health costs Therefore the study of endocrine and metabolic effects on maternal fetal and neonatal outcomes is an especially important research field These studies will lead to new approaches to predicting metabolic diseases in pregnancy and provide new solutions and effective interventions to prevent or delay those related diseases Furthermore they will reveal unknown pathophysiological mechanisms of inappropriate maternal endocrine and metabolic changes during pregnancy and their implications on short term and long term complications in the mother and offspring This could lead to updated diagnosis and treatment strategies for women with endocrine and metabolic diseases during pregnancy

Nutrition in Early Life Jane B. Morgan, John W. T. Dickerson, 2003-04-04 The publication of the Department of Health White Paper The Health of the Nation 1992 and Our Healthier Nation 1998 gave emphasis to the importance of nutritional health of the nation at all ages It is clear that the achievement of specific targets for pregnancy and infancy as set out in the White Paper will involve the training of all health care professionals in nutrition education This book responds to the challenge and focuses on good nutrition for and during pregnancy in low birth weight infants and during infancy It has a strong public health emphasis dealing with health prevention issues for the Nation's younger population The text is written as a scientific reference book for those seeking to apply science in the support of a successful pregnancy and in the prevention of nutritional problems during foetal and early post natal life The importance of optimal nutrition during these periods of life is emphasised by the overwhelming evidence that nutritional problems in early embryonic life may cause congenital malformations and during late foetal life and early post natal life may set the molecular programme for later
