Kirshenbaum, Ian M.C. Dixon, Pawan K. Singal, 2012-12-06 The focus of this special issue of Molecular and Cellular Biochemistry is underlying mechanisms that regulate cardiac growth The new information provided in this special issue can be utilized to design new treatment modalities that will reduce the incidence of cardiac failure which will improve quality of life in patients with chronic heart disease Biochemistry of Diabetes and Atherosclerosis James S.C. Gilchrist, Paramjit Tappia, Thomas Netticadan, 2012-12-06 Diabetes is an autoimmune inflammatory disease affecting many different organ systems and exhibiting both primary and secondary defects Because

diabetes affects a wide range of cellular systems a multidisciplinary effort has been mounted over the past several decades using a wide range of investigative techniques and methodologies in order to identify molecular mechanisms responsible for cellular dysfunction Because primary defects at various levels of sub cellular signaling intracellular calcium handling protein expression and energy regulation are often a primary consequence of diabetes This volume is a compilation of new multidisciplinary research that will broaden our current understanding of diabetes and cardiovascular disease as well as provide the basis for the development of novel therapeutic interventions

Pathophysiology and Pharmacology of Heart Disease Naranjan S. Dhalla, Inder S. Anand, Purshotam L. Wahi, 2012-12-06 Research at the molecular and the cellular level has greatly enhanced our understanding of the pathogenesis and management of heart disease Valuable contributions towards this end have been made by scientists from different disciplines including biochemistry physiology pathology molecular biology and biophysics We felt that it would be of interest and value to bring together experts from diverse specialities to present their work and to discuss the common problems encountered in their endeavours In accordance a symposium was organised in February 1988 at the Postgraduate Institute of Medical Education Research Chandigarh It was held during the annual meeting of the Indian section of the International Society for Heart Research This book is a compilation of some of the papers presented at the symposium The symposium was sponsored by the Council on Cardiac Metabolism of the International Society and Federation of Cardiology A number of Indian organisations gave generous financial help These included the National Academy of Medical Sciences Indian Council of Medical Research Council of Scientific and Industrial Research and Department of Science and Technology Desktop publishing was used to prepare this volume In doing so we came to appreciate the remarkable qualities skills and help rendered by Professor Dharam Vir For typing the manuscripts and for other secretarial assistance we gratefully acknowledge the help of Ravinder and Sawtantar

The Routledge Handbook on Biochemistry of Exercise Peter M. Tiidus, Rebecca E. K. MacPherson, Paul J. LeBlanc, Andrea R. Josse, 2020-12-28 From its early beginnings in the 1960s the academic field of biochemistry of exercise has expanded beyond examining and describing metabolic responses to exercise and adaptations to training to include a wide understanding of molecular biology cell signalling interorgan communication stem cell physiology and a host of other cellular and biochemical mechanisms regulating acute responses and chronic adaptations related to exercise performance human health disease nutrition and cellular functioning The Routledge Handbook on Biochemistry of Exercise is the first book to pull together the full depth and breadth of this subject and to

update a rapidly expanding field of study with current issues and controversies and a look forward to future research directions Bringing together many experts and leading scientists the book emphasizes the current understanding of the underlying metabolic cellular genetic and cell signalling mechanisms associated with physical activity exercise training and athletic performance as they relate to interact with and regulate cellular and muscular adaptations and consequent effects on human health disease nutrition and weight control and human performance With more emphasis than ever on the need to be physically active and the role that being active plays in our overall health from a whole body level down to the cell this book makes an important contribution for scholars medical practitioners nutritionists and coaches trainers working in research and with a wide range of clients This text is important reading for all students scholars and others with an interest in health nutrition and exercise training in general

Biochemical Regulation of Myocardium Roland Vetter, Ernst-Georg Krause, 2012-12-06 This special issue of Molecular and Cellular Biochemistry contains original research papers as well as invited reviews dedicated on the occasion of the 40th anniversary of the inauguration of the Heart Research Group in Berlin Buch that today forms a part there of the Max Delbrück Center for Molecular Medicine to Professor Albert Wollenberger founder of the Heart Research Group and for 21 years its head The papers in this issue are written by researchers working in the field of cardiovascular research who together with Albert Wollenberger share the belief that an integrative application of advances in molecular and cellular biology will lead to new concepts for treatment and prevention of cardiovascular diseases We hope that this special will serve as a good source of information in this regard We wish to thank all of the contributors for their help and cooperation We also wish to thank Mrs Verona Kuhle for her secretarial help We are grateful to Dr Naranjan S Dhalla Editor in Chief of Molecular and Cellular Biochemistry for his interest and encouragement and for agreeing to publish this issue in honor of Albert Wollenberger ROLAND VETTER and ERNST GEORG KRAUSE Max Delbrück Center for Molecular Medicine Robert Rossle StraBe 10 13122 Berlin Buch Germany PART I CARDIAC DEVELOPMENT AND REGULATION Molecular and Cellular Biochemistry 163 164 5 11 1996 1996 Kluwer Academic Publishers Canadian Journal of Biochemistry, 1976 *Biochemical Techniques in the Heart* John H. Sarcolemmal Biochemistry, 1987 **Cardiac Cell Biology** Elissavet Kardami, Larry Hryshko, Nasrin

Mesaeli,2013-06-29 Cardiac cell biology has come of age Recognition of activated or modified signaling molecules by specific antibodies new selective inhibitors and fluorescent fusion tags are but a few of the tools used to dissect signaling pathways and cross talk mechanisms that may eventually allow rational drug design Understanding the regulation of cardiac hypertrophy in all its complexity remains a fundamental goal of cardiac research Since the advancement of adenovirally mediated gene transfer transfection efficiency is no longer a limiting factor in the study of cardiomyocytes A limiting factor in considering cell transplantation as a strategy to repair the damaged heart is cell availability at the right time Cardiac gap junctions intercellular communication channels that allow electrical and metabolic coupling and play an important role in arrhythmogenesis are now understood to be exquisite sensors of cardiac change The reports in this volume include elegant studies that made use of cutting edge technological advances and many specialized reagents to address these issues

Membrane Transport in Biology James A. Schafer,Hans H. Ussing,Poul Kristensen,Gerhard H. Giebisch,2013-03-07 Well over one decade has passed since the appearance of the original four volumes of Membrane Transport in Biology Since the publication of the last volume there have been spectacular advances in this field These advances have been in part the result of the application of exciting new methodologies and in part the result of new insights into the regulation and integration of transport processes This volume as well as a sixth volume which is in preparation are intended to cover key areas in which the development has been particularly striking For many years the trend in studies of membrane transport had been that of increasing specialization with regard to the transporter of interest and of the cell or tissue studied This trend was supported by the enormous number of publications directed at understanding the cellular physiology of specific organ systems and tissues and also by the fact that different tissues often seemed to react so differently to the same conditions that mechanisms unique to each appear to be at play One of the happy developments in recent years has been the realization that this apparent disparity of behaviors in different tissues is based on varying combinations of a limited number of transport mechanisms all mediated by the same or similar proteins Some of these transport proteins have already been isolated and analyzed with respect to amino acid sequence whereas others are just entering this phase **The**

International Journal of Biochemistry ,1975 *Vanadium Compounds: Biochemical and Therapeutic Applications* Ashok K. Srivastava,Jean-Louis Chiasson,2012-12-06 The papers in this volume comprise invited reviews as well as original research papers presented at the Vanadium Symposium held July 29 31 1994 Vanadium is a trace element and its compounds have been shown to exert a wide variety of insulin like effects including the ability to lower hyperglycemia in several experimental models of diabetes mellitus Because of the possibility that vanadium compounds may be able to serve as potential therapeutic agents for the treatment of diabetes and possibly other diseases this trace element has attracted the attention of biomedical researchers from a variety of fields The Vanadium Symposium 1994 was therefore organized to facilitate exchange of ideas and increase interaction among researchers of different disciplines actively engaged in studying the

biological actions of vanadium compounds The papers are written by leading vanadium researchers and are grouped into three main sections the chemistry biochemical and physiological aspects and potential therapeutic use and toxic effects of vanadium compounds A good source of information on vanadium chemistry and biology Neuropeptide Function in the Gastrointestinal Tract Edwin E. Daniel,2019-08-15 First published in 1991 This book assimilates and evaluates the rapidly accumulating information regarding neuropeptides in the gut their chemistry genetic control processing in enteric nerves the projections of their nerves their actions at the tissue cell and molecular levels and their roles in controlling gut motility in health and disease Neuropeptide Function in the Gastrointestinal Tract is directed to scientists in all disciplines who work with neuropeptides as well as physiologists interested in the neural and smooth muscle actions of neuropeptides

Cumulated Index Medicus ,1977 *The Resistance Vasculature* John A. Bevan,William Halpern,Michael J. Mulvany,2012-12-06 Resistance arteries have been recognized for some time as key factors in the regulation of vascular flow resistance where they determine the regional and local distribution of blood and arterial pressure Chapters provide an overview of the physiological biochemical and electrophysiological characteristics of these vessels as well as a critical evaluation of the methodologies for studying small arteries and an examination of the membrane and neural mechanisms involved in the control of vascular tone
