Principles and Applications of Density Functional Theory in Inorganic Chemistry II N. Kaltsoyannis, J.E. McGrady, 2004-08-19 It is difficult to overestimate the impact that density functional theory has had on computational quantum chemistry over the last two decades Indeed this period has seen it grow from little more than a theoretical curiosity to become a central tool in the computational chemist s armoury Arguably no area of chemistry has benefited more from the meteoric rise in density functional theory than inorganic chemistry the ability to obtain reliable results in feasible time scales on systems containing heavy elements such as the d and f transition metals has led to an enormous growth in computational inorganic chemistry The inorganic chemical literature reflects this growth it is almost impossible to open a modern inorganic chemistry journal without finding several papers devoted exclusively or in part to density functional theory calculations The real importance of the rise in density functional theory in inorganic chemistry is undoubtedly the much closer synergy between theory and experiment than was previously possible In these volumes world

leading researchers describe recent developments in the density functional theory and its applications in modern inorganic and b inorganic chemistry These articles address key issues key issues in both sol state and molecular inorganic chemistry such as spectroscopy mechanisms catalysis bonding and magnetism The articles in volume I are more focussed on advances in density functional methodology while those in Volume II deal more with applications although this is by no means a rigid distinction Nuclear Magnetic Resonance G A Webb,2007-10-31 As a spectroscopic method Nuclear Magnetic Resonance NMR has seen spectacular growth over the past two decades both as a technique and in its applications Today the applications of NMR span a wide range of scientific disciplines from physics to biology to medicine Each volume of Nuclear Magnetic Resonance comprises a combination of annual and biennial reports which together provide comprehensive of the literature on this topic This Specialist Periodical Report reflects the growing volume of published work involving NMR techniques and applications in particular NMR of natural macromolecules which is covered in two reports NMR of Proteins and Acids and NMR of Carbohydrates Lipids and Membranes For those wanting to become rapidly acquainted with specific areas of NMR this title provides unrivalled scope of coverage Seasoned practitioners of NMR will find this an invaluable source of current methods and applications Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research Compiled by teams of leading authorities in the relevant subject areas the series creates a unique service for the active research chemist with regular in depth accounts of progress in particular fields of chemistry Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis
