Nejat Ince,2012-12-06 Among the space activities of the last three decades satellite communications SATCOM has found the widest application in meeting both civil and military communications requirements Several international regional and national SATCOM systems of increasing capacity capability and complexity have been and are being implemented over the years The latest versions are utilizing such concepts as spot beams processing transponders in SS TDMA and operations in different frequency bands including the EHF band On the military side the United States of America the United Kingdom France and NATO the North Atlantic Treaty Organisation have been the only owners and operators of military SATCOM systems in the West The systems in being and under development use satellites and ground terminals with characteristics which differ from the civilian ones with respect to frequency bands utilised and survivability and interoperability The SATCOM has given the military users the potential of having much needed mobility flexibility and survivability in strategic and tactical communications for land sea and air operations It must however be said particularly for the military SATCOM systems that they have been evolved in big jumps both in time and capability each jump involving the deployment of two or three often specially designed large satellites large expenses and rather traumatic transition between jumps Despite these undesirable features these systems did not have the required degree of suevivability and flexibility

Communication Satellite Systems Technology Richard B. Marsten,2014-12-03 Communication Satellite Systems Technology reviews the state of the art in communication satellite systems technology Topics covered range from commercial point to point systems and military satellite communication systems to satellite support subsystems and components along with high power systems Communication satellites are also discussed from a sociological perspective Comprised of 50 chapters this book begins with a 1945 article by Arthur C Clarke in which he proposed the construction of rocket space stations in orbit that would provide complete radio coverage of the globe as well as extraterrestrial relay services The reader is then introduced to the Early Bird satellite and its hydrogen peroxide orbit control and orientation system Details of the sequence of maneuvers required after transfer ellipse injection until final placement in a stationary orbit are given The methods of calculation of maneuver parameters as well as numerical examples of certain Early Bird orbit changes and maneuver parameters are described The effects of the principal long term disturbing forces on the satellite are also considered Subsequent chapters focus on military satellite communication systems satellite support subsystems and components high power systems and systems concepts The organization and program of Intelsat are also evaluated This

monograph will be of value to practitioners in the fields of aeronautics astronautics and satellite communications

Satellite Communication Systems Design S. Tirró, 1993-06-30 Writing a comprehensive book on satellite communications requires the command of many technical disciplines and the availability of up to date information on international recommendations system architectures and equipment standards It is therefore necessary to involve many authors each possessing a good level of knowledge in a particular discipline The problem of using a coherent and unambiguous set of definitions and basic terms has been solved by including in the book all the background information needed for understanding satellite communication systems without any major reference to other textbooks specializing in particular disciplines The obvious consequence of this approach has been the large size of the book with the advantages however of practically complete independence from other books more systematic discussion of the subject matter and better readability After the required background information emphasis has been placed on the discussion of techniques and system design criteria rather than on specific equipment implementation or description of particular systems The book may be divided in five parts as follows The first five chapters provide most of the required background information Chapter 6 is an introductory outline of satellite communication systems Chapters 7 to 13 deal with the various aspects of technical system design Chapter 14 discusses system economics Chapter 15 provides a brief insight into some foreseeable future developments of satellite communications

Satellite Communication Systems Engineering Wilbur L. Pritchard, Henri G. Suyderhoud, Robert A. Nelson, 1993 Detailing concepts and calculations from the entire field this text is sophisticated enough to permit the kinds of analysis needed for major systems planning decisions while it avoids the highly theoretical work found in the literature on special disciplines This second edition covers channel capacity picture quality signal to noise ratio bit error rate earth station antenna size and offers new material on orbital mechanics and geometry For satellite communications systems engineers
