Scientific Satellites William R. Corliss,1967 The Role of Small Satellites in NASA and NOAA Earth Observation Programs National Research Council,Commission on Physical Sciences, Mathematics, and Applications,Space Studies Board,Committee on Earth Studies,2000-05-12 Remote observations of Earth from space serve an extraordinarily broad range of purposes resulting in extraordinary demands on those at the National Aeronautics and Space Administration NASA the National Oceanic and Atmospheric Administration NOAA and elsewhere who must decide how to execute them In research Earth observations promise large volumes of data to a variety of disciplines with differing needs for measurement type simultaneity continuity and long term instrument stability Operational needs such as weather forecasting add a distinct set of requirements for continual and highly reliable monitoring of global conditions The Role of Small Satellites in NASA and NOAA Earth Observation Programs confronts these diverse requirements and assesses how they might be met by small satellites In the past the preferred architecture for most NASA and NOAA missions was a single large spacecraft platform containing a sophisticated suite of instruments But the recognition in other areas of space research that cost effectiveness flexibility and robustness may be enhanced by using small spacecraft has raised questions about this philosophy of Earth observation For example NASA has already abandoned its original plan for a follow on series of major platforms in its Earth Observing System This study finds that small spacecraft can play an important role in Earth observation programs providing to this field some of the expected benefits that are normally associated with such programs such as rapid development and lower individual mission cost It also identifies some of the programmatic and technical challenges associated with a mission composed of small spacecraft as well as reasons why more traditional larger platforms might still be preferred The reasonable conclusion is that a systems level examination is required to determine the optimum architecture for a given scientific and or operational objective The implied new challenge is for NASA and NOAA to find intra and interagency planning mechanisms that can achieve the most appropriate and cost effective balance among their various requirements

Space Piracy Marc Feldman,Hugh Taylor,2025-01-07 Comprehensive exploration of humanity s potential for criminal activities in outer space Space Piracy Preparing for a Criminal Crisis in Orbit is a forward thinking resource that considers analyzes and provides solutions to the influence of the ignoble side of humanity in the realm of outer space where potential for crime corruption piracy and war increases as the exploitation of space as a commercial resource continues to develop This book blends the authors knowledge with that of subject matter experts to deliver a holistic understanding of criminality in space and help readers broaden their horizons beyond their own area of specialization Some

of the topics explored in this insightful book include Space hacking from software data network and hardware risks to existing cybersecurity standards and practices in space Criminal organizations that might pursue criminal activities in space including cartels kidnappers and devicenappers and governments Laws and treaties relevant to space crime such as the Communications Satellite Act and the Outer Space Treaty of 1967 Filled with practical thought provoking knowledge and guidance Space Piracy Preparing for a Criminal Crisis in Orbit earns a well deserved spot on the bookshelves of professionals working in the best of humanity s institutions including law and intelligence services finance insurance and risk management corporations and the sciences who seek to combat what the worst of us may be dreaming up **Military Space Power**

James Fergusson, Wilson W.S. Wong, 2010-02-26 This handbook examines the militarization of space providing a fair and balanced discussion of the emerging issues concerning space security and defense The militarization of space is already underway with unpredictable consequences for the way war will be conducted in the future Military Space Power A Guide to the Issues examines the militarization of space from historical technological and geopolitical angles It traces space militarization from concepts proposed before World War II through the use of space for military surveillance and communications purposes to the actual deployment of weapons that pass through high altitude space such as ballistic missiles and nuclear armed interceptors The book focuses on the main space pioneers like the United States Russia and China but also includes discussion of potential future players It looks at the state of current space technology but also projects how recent inventions or new discoveries might be weaponized for the space environment And it analyzes how the militarization of space might influence international relations The result is a fair and balanced discussion of the emerging issues concerning space security and defense *Weaponisation of Space: An Inevitable Reality and Plausible Fallout* Group Captain PA Patil, 2017-01-15 Militarily use of spacebased assets when integrated with operations assumes importance as one of the many force multipliers As on date outer space is being extensively used by the armed forces for varied services which include navigation intelligence surveillance reconnaissance environmental monitoring and advance warning The command and control in today s netcentric environment also depends on space resources Thus the use of outer space with spacebased assets in support of military operations leads to the deduction that space as a medium stands militarised Of late many of the dominant nations have developed or are expanding capabilities to attack the spacebased assets of potential adversaries to disrupt command and control structures Countries like the US and China are contesting for space supremacy and working towards developing spacebased weapons capable of being delivered from spacebased platforms These developments in turn are infusing a sense of insecurity amongst other international players including India and have raised concerns worldwide Development of spacebased weapons by any state has the potential to ignite a new arms race in space as many countries now possess the wherewithal for launching spacebased assets capable of carrying the required payloads Thus from the present capability of militarisation of space we seem to be graduating towards weaponisation of space As outer space has been

designated as one of the global commons any sort of deployment or employment of space weapons raises concerns and any use of spacebased weapons will have unpleasant cascading effects In the absence of any international curb or law on space weaponisation it continues to be a conceptual possibility as well as an empirical reality **Commercial Communications**
