South American ecosystems suffered one of the greatest biogeographical events after the establishment of the Panamian land bridge called the Great American Biotic Interchange GABI This refers to the exchange in several phases of land mammals between the Americas this event started during the late Miocene with the appearance of the Holartic Procyonidae Huayquerian Age in South America and continues today The major phases of mammalian dispersal occurred from the Latest Pliocene Marplatense Age to the Late Pleistocene Lujanian Age The most important and richest localities of Late Miocene Holocene fossil vertebrates of South America are those of the Pampean region of Argentina There are also several Late Miocene and Pliocene localities in western Argentina and Bolivia Other important fossils have been collected in localities of Pleistocene age outside Argentina Tarija Bolivia karstic caves of Lagoa Santa and the recently explored caves of Tocantins Brasil Talara Peru La Carolina Ecuador Muaco Venezuela and Cueva del Milodon Chile among others The book discusses basic information for interpreting the GABI such as taxonomic composition incorporating the latest revisions at classical and new localities for each stage addressing climate environments and time boundaries for each stage It includes the chronology and dynamics of the GABI the integration of South American mammalian faunas through time the Quaternary mammalian extinctions and the composition of recent mammalian fauna of the continent **Temas de la Biodiversidad Del Litoral Fluvial Argentino** Florencio Gilberto Aceñolaza, 2004 **The Atlantic Forest of South America** Carlos Galindo Leal, Ibsen de Gusmão Câmara, 2003 This is a detailed assessment of the state of biodiversity in the Atlantic Forest Separate sections examine each of the three countries that are home to the forest beginning with a brief overview that explores the dynamics of biodiversity loss in that country and outlining the topics to be addressed *Ecology and Conservation of Tropical Ungulates in Latin America* Sonia Gallina-Tessaro, 2019-11-20 This book brings together the latest information on tropical ungulates in different Latin American countries These animals are not only important from the point of view of their role in different ecosystems but also have cultural value for people The book also discusses topics such as habitat transformation and hunting as these species are an important source of food in many places Addressing ungulate natural communities in diverse ecosystems and countries the book provides information on specific aspects of each of the most

representative species and highlights topics to help readers better understand these species and develop effective management and conservation strategies The information presented also reveals the need for more knowledge and will hopefully provide the incentive for continued studies on this important group of animals This publication serves as a reference for academic research on ungulate ecology behavior and dynamics as well as the basis for conservation strategies
