**Women's Studies** Linda Krikos, Cindy Ingold, 2004-08-30 This truly monumental work maps the literature of women s studies covering thousands of titles and Web sites in 19 subject areas published between 1985 and 1999 Intended as a reference and collection development tool this bibliography provides a guide for women s studies information for each title along with a detailed often evaluative review The annotations summarize each work s content its importance or contribution to women s studies and its relationship to other titles on the subject Core titles and titles that are out of print are noted and reviews indicate which titles are appropriate as texts or supplemental texts This definitive guide to the literature of women s

studies is a must purchase for academic libraries that support women's studies programs and it is a useful addition to any academic or public library that endeavors to represent the field. A team of subject specialists has taken on the immense task of documenting publications in the area of women's studies in the last decades of the 20th century. The result is this truly monumental work which maps the field covering thousands of titles and Web sites in 19 subject areas published between 1985 and 1999. Intended as a reference and collection development tool, this bibliography provides a guide for women's studies information for each title along with a detailed, often evaluative review. The annotations summarize each work's content, its importance or contribution to women's studies, and its relationship to other titles on the subject. Most reviews cite and describe similar and contrasting titles, substantially extending the coverage. Core titles and titles that are out of print are noted, and reviews indicate which titles are appropriate as texts or supplemental texts. Taking up where the previous volume by Loeb Searing and Stineman left off, this is the definitive guide to the literature of women's studies. It is a must purchase for academic libraries that support women's studies programs and a welcome addition to any academic or public library that endeavors to represent the field.

**Removing Barriers** Jill M. Bystydzienski, Sharon R. Bird, 2006-03-20. Movement into academic science, technology, engineering, and mathematics (STEM) fields has been slow for women and minorities. Not only are women and minorities underrepresented in STEM careers, there is strong evidence that many academic departments are resistant to addressing the concerns that keep them from entering careers in these fields. In light of recent controversies surrounding these issues, this volume examining reasons for the persistence of barriers that block the full participation and advancement of underrepresented groups in the sciences and addressing how academic departments and universities can remedy the situation is particularly timely. As a whole, the volume shows positive examples of institutions and departments that have been transformed by the inclusion of women and recommends a set of best practices for continuing growth in positive directions.

*Science and Social Inequality* Sandra Harding, 2023-12-11. In *Science and Social Inequality*, Sandra Harding makes the provocative argument that the philosophy and practices of today's Western science, contrary to its Enlightenment mission, work to insure that more science will only worsen existing gaps between the best and worst off around the world. She defends this claim by exposing the ways that hierarchical social formations in modern Western sciences encode antidemocratic principles and practices, particularly in terms of their services to militarism, the impoverishment and alienation of labor, Western expansion, and environmental destruction. The essays in this collection, drawing on feminist, multicultural, and postcolonial studies, propose ways to reconceptualize the sciences in the global social order. At issue here are not only social justice and environmental issues but also the accuracy and comprehensiveness of our understandings of natural and social worlds. The inadvertent complicity of the sciences with antidemocratic projects obscures natural and social realities and thus blocks the growth of scientific knowledge. Scientists, policy makers, social justice movements, and the consumers of scientific products—that is, the rest of us—can work together and separately to improve this

situation
