Mission Control:

Mission Control Michael Peter Johnson, 2015-10-18 Brave astronauts flaring rockets and majestic launches are only one side of the story of spaceflight. Any mission to space depends on years if not decades of work by thousands of dedicated individuals on the ground. These are the people whose voices offer a friendly link to Earth in the void of space whose hands maneuver rovers across the face of planets and whose skills guide astronauts home. This book is a long overdue history of three major centers that have managed important missions since the dawn of the space age. In *Mission Control* Michael Johnson explores the famous Johnson Space Center in Houston, the Jet Propulsion Laboratory in Pasadena and the European Space Operations Centre in Darmstadt, Germany, each a strategically designed micro environment responsible for the operation of spacecraft and the safety of passengers. He explains the motivations behind the location of each center and their intricate design. He shows how the robotic spaceflight missions overseen in Pasadena and Darmstadt set these centers apart from Houston and compares the tracking networks used for different types of spacecraft. Johnson argues that the type of spacecraft and the missions they controlled, not the nations they represented, defined how the centers developed, yet these centers ended up playing vital national roles as space technology became a battleground for international power struggles in the Cold War years and even after. The most visible part of a conflict that was just as real as the wars in Korea, Vietnam and Afghanistan and caused great global anxiety, mission control centers have served as symbols of national security in the public eye and pivotal links in the history of modern technology. *Apollo Mission Control* Manfred "Dutch" von

Ehrenfried, 2018-06-21 This book describes the history of this now iconic room which represents America's space program during the Gemini, Apollo, Skylab, Apollo Soyuz and early Space Shuttle eras. It is now a National Historic Landmark and is being restored to a level which represents the day the flight control teams walked out after the last lunar landing missions. The book is dedicated to the estimated 3,000 men and women who supported the flights and tells the story from their perspective. It describes the rooms of people supporting this control center: those rooms of engineers, analysts and scientists most people never knew about. Some called it a shrine and some called it a cathedral. Now it will be restored to its former glory and soon thousands will be able to view the place where America flew to the moon. *Mission Control* Deborah A.
