Fundamentals, Properties, and Applications of Polymer Nanocomposites Joseph H. Koo, 2016-10-31 This book is focused primarily on polymer nanocomposites based on the author's research experience as well as open literature The environmental health and safety aspects of nanomaterials and polymer nanocomposites risk assessment and safety standards and fire toxicity of polymer nanocomposites are studied In the final chapter a brief overview of opportunities trends and challenges of polymer nanocomposites are included Throughout the book the theme is developed that polymer nanocomposites are a whole family of polymeric materials whose properties are capable of being tailored to meet specific applications This volume serves as a general introduction to students and researchers just entering the field and to scholars from other subfields seeking information

Characterization of Nanocomposites Frank Abdi, Mohit Garg, 2017-03-31 These days advanced multiscale hybrid materials are being produced in the industry studied by universities and used in several applications Unlike for macromaterials it is difficult to obtain the physical mechanical electrical and thermal properties of nanomaterials because of the scale Designers however must have knowledge of these properties to perform any finite element analysis or durability and damage tolerance analysis This is the book that brings this knowledge within easy reach What makes the book unique is the fact that its approach that combines multiscale multiphysics and statistical analysis with multiscale progressive failure analysis The combination gives a very powerful tool for minimizing tests improving accuracy and understanding the effect of the statistical nature of materials in addition to the mechanics of advanced multiscale materials all the way to failure The

book focuses on obtaining valid mechanical properties of nanocomposite materials by accurate prediction and observed physical tests as well as by evaluation of test anomalies of advanced multiscale nanocomposites containing nanoparticles of different shapes such as chopped fiber spherical and platelet in polymeric ceramic and metallic materials The prediction capability covers delamination fracture toughness impact resistance conductivity and fire resistance of nanocomposites The methodology employs a high fidelity procedure backed with comparison of predictions with test data for various types of static fatigue dynamic and crack growth problems Using the proposed approach a good correlation between the simulation and experimental data is established
