K-theory and Homological Algebra Hvedri Inassaridze, 2006-11-14      Computation and Combinatorics in Dynamics, Stochastics and Control Elena Celledoni, Giulia Di Nunno, Kurusch Ebrahimi-Fard, Hans Zanna Munthe-Kaas, 2019-01-13 The Abel Symposia volume at hand contains a collection of high quality articles written by the world's leading experts and addressing all mathematicians interested in advances in deterministic and stochastic dynamical systems numerical analysis and control theory In recent years we have witnessed a remarkable convergence between individual mathematical disciplines that approach deterministic and stochastic dynamical systems from mathematical analysis computational mathematics and control theoretical perspectives Breakthrough developments in these fields now provide a common mathematical framework for attacking many different problems related to differential geometry analysis and algorithms for stochastic and deterministic dynamics In the Abel Symposium 2016 which took place from August 16-19 in Rosendal near Bergen leading researchers in the fields of deterministic and stochastic differential equations control theory numerical analysis algebra and random processes presented and discussed the current state of the art in these diverse fields The current Abel Symposia volume may serve as a point of departure for exploring these related but diverse fields of research as well as an indicator of important current and future developments in modern mathematics      Topics in Hyperplane Arrangements Marcelo Aguiar, Swapneel Mahajan, 2017-11-22 This monograph studies the interplay between various algebraic geometric and combinatorial aspects of real hyperplane arrangements It provides a careful organized and unified treatment of several recent developments in the field and brings forth many new ideas and results It has two parts each divided into eight chapters and five appendices with background material Part I gives a detailed discussion on faces flats chambers cones gallery intervals lunes and other geometric notions associated with arrangements The Tits monoid plays a central role Another important object is the category of lunes which generalizes the classical associative operad Also discussed are the descent and lune identities distance functions on chambers and the combinatorics of the braid arrangement and related examples Part II studies the structure and representation theory of the Tits algebra of an arrangement It gives a detailed analysis of idempotents and Peirce decompositions and connects them to the classical theory of Eulerian idempotents It introduces the space of Lie elements of an arrangement which generalizes the classical Lie operad This space is the last nonzero power of the radical of the Tits algebra It is also the socle of the left ideal of chambers and of the right ideal of Zie elements Zie elements generalize the classical Lie idempotents They include Dynkin elements associated to generic half spaces which generalize the classical Dynkin idempotent Another important object is the lune incidence algebra which marks the beginning of noncommutative Möbius theory These ideas are also brought upon the study of the Solomon descent algebra The monograph is written with clarity and in sufficient detail to make it accessible to graduate students It can also serve as a useful reference to experts      Extended Abstracts Spring 2015 Dolores Herbera, Wolfgang Pitsch, Santiago

Zarzuela, 2016-11-30 This book includes 33 expanded abstracts of selected talks given at the two workshops Homological Bonds Between Commutative Algebra and Representation Theory and Brave New Algebra Opening Perspectives and the conference Opening Perspectives in Algebra Representations and Topology held at the Centre de Recerca Matemàtica CRM in Barcelona between January and June 2015 These activities were part of the one semester intensive research program Interactions Between Representation Theory Algebraic Topology and Commutative Algebra IRTATCA Most of the abstracts present preliminary versions of not yet published results and cover a large number of topics including commutative and non commutative algebra algebraic topology singularity theory triangulated categories representation theory overlapping with homological methods This comprehensive book is a valuable resource for the community of researchers interested in homological algebra in a broad sense and those curious to learn the latest developments in the area It appeals to established researchers as well as PhD and postdoctoral students who want to learn more about the latest advances in these highly active fields of research

Commutative Algebra Winfried Bruns, Aron Simis, 2006-11-14 The central theme of this volume is commutative algebra with emphasis on special graded algebras which are increasingly of interest in problems of algebraic geometry combinatorics and computer algebra Most of the papers have partly survey character but are research oriented aiming at classification and structural results

Combinatorics and Physics Kurusch Ebrahimi-Fard, 2011 This book is based on the mini workshop Renormalization held in December 2006 and the conference Combinatorics and Physics held in March 2007 Both meetings took place at the Max Planck Institut für Mathematik in Bonn Germany Research papers in the volume provide an overview of applications of combinatorics to various problems such as applications to Hopf algebras techniques to renormalization problems in quantum field theory as well as combinatorial problems appearing in the context of the numerical integration of dynamical systems in noncommutative geometry and in quantum gravity In addition it contains several introductory notes on renormalization Hopf algebras Wilsonian renormalization and motives

Gubarenis, 2017-04-11 The theory of algebras rings and modules is one of the fundamental domains of modern mathematics General algebra more specifically non commutative algebra is poised for major advances in the twenty first century together with and in interaction with combinatorics just as topology analysis and probability experienced in the twentieth century This is the second volume of *Algebras Rings and Modules Non commutative Algebras and Rings* by M Hazewinkel and N Gubarenis a continuation stressing the more important recent results on advanced topics of the structural theory of associative algebras rings and modules      **Algebraic Geometry and Complex Analysis** Enrique Ramirez de Arellano, 1989-12-20 From the contents G R Kempf The addition theorem for abstract Theta functions L Brambila Existence of certain universal extensions A Del Centina S Recillas On a property of the Kummer variety and a relation between two moduli spaces of curves C Gomez Mont On closed leaves of holomorphic foliations by curves 38 pp G R Kempf Fay's trisecant formula D Mond R Pelikaan Fitting ideals and multiple points of analytic mappings 55 pp F O Schreyer Certain Weierstrass points occur at most once on a curve R Smith H Tapia Recillas The Gauss map on subvarieties of Jacobians of curves with  $g \geq 2$       **Combinatorial Species and Tree-like Structures** François Bergeron, Gilbert Labelle, Pierre Leroux, 1998 The combinatorial theory of species introduced by Joyal in 1980 provides a unified understanding of the use of generating functions for both labelled and unlabelled structures and as a tool for the specification and analysis of these structures Of particular importance is their capacity to transform recursive definitions of tree like structures into functional or differential equations and vice versa The goal of this book is to present the basic elements of the theory and to give a unified account of its developments and applications It offers a modern introduction to the use of various generating functions with applications to graphical enumeration Polya theory and analysis of data structures in computer science and to other areas such as special functions functional equations asymptotic analysis and differential equations This book will be a valuable reference to graduate students and researchers in combinatorics analysis and theoretical computer science      **A Nonlinear Theory of Generalized Functions** Hebe Azevedo Biagioni, 1990      **Numerical Analysis and Parallel Processing** Peter R. Turner, 2006-11-14 Each week of this three week meeting was a self contained event although each had the same underlying theme the effect of parallel processing on numerical analysis Each week provided the opportunity for intensive study to broaden participants research interests or deepen their understanding of topics of which they already had some knowledge There was also the opportunity for continuing individual research in the stimulating environment created by the presence of several experts of international stature This volume contains lecture notes for most of the major courses of lectures presented at the meeting they cover topics in parallel algorithms for large sparse linear systems and optimization an introductory survey of level index arithmetic and superconvergence in the finite element method      **Quantitative Corporate Finance** Andrew John Sommesse, 1990 The book addresses several problems in contemporary corporate finance

optimal capital structure both in the US and in the G7 economies the Capital Asset Pricing Model CAPM and the Arbitrage Pricing Model APT and the implications for the cost of capital dividend policy sales forecasting and pro forma statement analysis leverage and bankruptcy and mergers and acquisitions It is designed to be used as an advanced graduate corporate financial management textbook     Real Analytic and Algebraic Geometry Margherita Galbiati,1990-03-07     Enumerative Geometry Sebastián Xambó-Descamps,1990 Proceedings of a conference held in Sitges Spain June 1987 and one additional contribution Annotation copyrighted by Book News Inc Portland OR     *Ecole D'été de Probabilités de Saint-Flour XVIII - 1988* Alano Ancona,Donald Geman,Nobuyuki Ikeda,1990     **Automorphism Groups of Compact Bordered Klein Surfaces** Emilio Bujalance García,Emilio Bujalance,1990-09-12 This research monograph provides a self contained approach to the problem of determining the conditions under which a compact bordered Klein surface  $S$  and a finite group  $G$  exist such that  $G$  acts as a group of automorphisms in  $S$  The cases dealt with here take  $G$  cyclic abelian nilpotent or supersoluble and  $S$  hyperelliptic or with connected boundary No advanced knowledge of group theory or hyperbolic geometry is required and three introductory chapters provide as much background as necessary on non euclidean crystallographic groups The graduate reader thus finds here an easy access to current research in this area as well as several new results obtained by means of the same unified approach     **Topological Fixed Point Theory and Applications** Boju Jiang,1989-11-28 This selection of papers from the Beijing conference gives a cross section of the current trends in the field of fixed point theory as seen by topologists and analysts Apart from one survey article they are all original research articles on topics including equivariant theory extensions of Nielsen theory periodic orbits of discrete and continuous dynamical systems and new invariants and techniques in topological approaches to analytic problems     Subject Guide to Books in Print ,1997
