Modalisation Cognitive Et Resolution De Problemes:

Modélisation cognitive et résolution de problèmes Guy Caplat, 2002-01-01 L'automatisation totale ou partielle d'un processus de résolution de problèmes nécessite une analyse, une modélisation puis une traduction en un programme informatique des connaissances humaines. En désignant les objets qui nous entourent en les organisant en structures significatives, la connaissance possède un rôle de médiation entre une réalité perçue et des interprétations rationnelles. Mais quels sont le rôle et la nature des connaissances mobilisées par l'humain dans le cadre d'une activité de résolution de problèmes ? Dans quelle mesure ces connaissances sont-elles modélisables ? Sous quels formalismes ? Quelles sont les connaissances mises en jeu dans un processus de modélisation ? Quelle méthodologie adopter pour traduire des connaissances humaines en programmes informatiques ? C'est ces questions fondamentales que cherche à répondre cette excellente introduction à la modélisation cognitive. L'ouvrage s'adresse aux ingénieurs, étudiants et chercheurs en intelligence artificielle en modélisation et plus particulièrement en ingénierie des connaissances.

Intelligent Tutoring Systems Claude Frasson, Gilles Gauthier, 1992-05-27 This volume of the Encyclopaedia offers a systematic introduction and a comprehensive survey of the theory of complex spaces. It covers topics like semi-normal complex spaces, cohomology, the Levi problem, q -convexity and q -concavity. It is the first survey of this kind. The authors are internationally known outstanding experts who developed substantial parts of the field. The book contains seven chapters and an introduction written by Remmert describing the history of the subject. The book will be very useful to graduate students and researchers in complex analysis, algebraic geometry and differential geometry. Another group of readers will consist of mathematical physicists who apply results from these fields.

Signed Language and Gesture Research in Cognitive Linguistics Terry Janzen, Barbara Shaffer, 2023-07-24 This volume represents the first time that researchers on signed language and gesture have come together with a coherent focus under the framework of cognitive linguistics. The pioneering work of Sherman Wilcox is highlighted throughout, scaffolding much of the research of these contributors. The five sections of the volume reflect critical areas of Dr Wilcox's own research in cognitive linguistics: Guiding research principles in signed language, gesture and cognitive linguistics; iconicity across signed and spoken linguistics; multimodality, blending, depiction and metaphor in signed languages and specific grammatical constructions as form-meaning pairings. The authors of this volume exemplify and continue Dr Wilcox's work of bridging signed and spoken language disciplines by contributing chapters that represent a multiplicity of perspectives on signed, spoken and gesture data. This volume presents a unified collection of cognitive linguistics research by leading authors that will be of interest to readers in the fields of signed and spoken language, linguistics, gesture studies and general linguistics.
