Nuggets From Numbers:

Explorations in Number Theory Cam McLeman, Erin McNicholas, Colin Starr, 2022-12-18 This innovative undergraduate textbook approaches number theory through the lens of abstract algebra. Written in an engaging and whimsical style, this text will introduce students to rings, groups, fields, and other algebraic structures as they discover the key concepts of elementary number theory. Inquiry-based learning (IBL) appears throughout the chapters, allowing students to develop insights for upcoming sections while simultaneously strengthening their understanding of previously covered topics. The text is organized around three core themes: the notion of what a number is and the premise that it takes familiarity with a large variety of number systems to fully explore number theory; the use of Diophantine equations as catalysts for introducing and developing structural ideas; and the role of abstract algebra in number theory, in particular the extent to which it provides the Fundamental Theorem of Arithmetic for various new number systems. Other aspects of modern number theory, including the study of elliptic curves, the analogs between integer and polynomial arithmetic, p -adic arithmetic, and relationships between the spectra of primes in various rings, are included in smaller but persistent threads woven through chapters and exercise sets. Each chapter concludes with exercises organized in four categories: Calculations and Informal Proofs, Formal Proofs, Computation and Experimentation, and General Number Theory Awareness. IBL Exploration worksheets appear in many sections, some of which involve numerical investigations. To assist students who may not have experience with programming languages, Python worksheets are available on the book's website. The final chapter provides five additional IBL explorations that reinforce and expand what students have learned and can be used as starting points for independent projects. The topics covered in these explorations are public key cryptography, Lagrange's four square theorem, units and Pell's Equation, various cases of the solution to Fermat's Last Theorem, and a peek into other deeper mysteries of algebraic number theory. Students should have a basic familiarity with complex numbers, matrix algebra, vector spaces, and proof techniques, as well as a spirit of adventure to explore the numberverse.

Right on the Numbers Nino Frostino,2004 The basic subject of the book is to justify which athlete was the Greatest to ever wear a particular number In my research I listed all of the possible uniform numbers 0 to 99 took the finest athletes from the four major sports baseball basketball football and hockey and slotted them under their appropriate uniform number For each player I created a mini biography detailing their finest exploits on the field whether it was All Star nods championships won records held on field highlights etc Basically I created a case for that athlete to be considered the best to ever wear the number Among the possible uniform numbers I ve listed nearly 850 athletes for consideration and provided the accompanying biography At the end of each section I form a debate as to the Greatest to ever wear the number and then make a selection After the selection is posted I then list some quotes made by or about the athlete for the reader to gain even more insight into the player Even if the reader is not overly concerned about the choice as to the Greatest under each uniform number the book also serves as a wonderful reference guide If the reader is interested in finding out more about any of the listed athletes it s easy to look up the player and find out who he played for and what he did between the white lines In either case Right On the Numbers serves multiple uses and is a must have for any true sports fan

Integers, Polynomials, and Rings Ronald S. Irving, 2004-01-08 This book began life as a set of notes that I developed for a course at the University of Washington entitled Introduction to Modern Algebra for Teachers Originally conceived as a text for future secondary school mathematics teachers it has developed into a book that could serve well as a text in an undergraduate course in abstract algebra or a course designed as an introduction to higher mathematics This book differs from many undergraduate algebra texts in fundamental ways the reasons lie in the book's origin and the goals I set for the course The course is a two quarter sequence required of students intending to fulfill the requirements of the teacher preparation option for our B.A. degree in mathematics or of the teacher preparation minor It is required as well of those intending to matriculate in our university's Master's in Teaching program for secondary mathematics teachers This is the principal course they take involving abstraction and proof and they come to it with perhaps as little background as a year of calculus and a quarter of linear algebra The mathematical ability of the students varies widely as does their level of mathematical interest [Catalog of Copyright Entries. Proofs in Competition Math: Volume 1 Alexander Toller, Freya Edholm, Dennis Chen, 2019-07-04 All too often through common school mathematics students find themselves excelling in school math classes by memorizing formulas but not their applications or the motivation behind them As a consequence understanding derived in this manner is tragically based on little or no proof This is why studying proofs is paramount Proofs help us understand the nature of mathematics and show us the key to appreciating its elegance But even getting past the concern of why should this be true students often face the question of when will I ever need this in life Proofs in Competition Math aims to remedy these issues at a wide range of levels from the fundamentals of competition math all the way to the Olympiad level and beyond Don't worry if you don't know all of the math in this book there will be prerequisites for each skill level giving you a better idea of your current strengths and weaknesses and allowing you to set realistic goals as a math student So mathematical minds we set you off *The Publishers' Circular and Booksellers' Record of British and Foreign Literature*, 1895 *The American Catalog, 1900-1905*, 1905 **Information Retrieval Technology** Yuexian
