Pi: A Source Book J.L. Berggren, Jonathan Borwein, Peter Borwein, 2013-06-29 The aim of this book is to provide a complete history of pi from the dawn of mathematical time to the present The story of pi reflects the most seminal the most serious and sometimes the silliest aspects of mathematics and a surprising amount of the most important mathematics and mathematicians have contributed to its unfolding Pi is one of the few concepts in mathematics whose mention evokes a response of recognition and interest in those not concerned professionally with the subject Yet despite this no source book on pi has been published One of the beauties of the literature on pi is that it allows for the inclusion of very modern yet still accessible mathematics Mathematicians and historians of mathematics will find this book indispensable

Teachers at every level from the seventh grade onward will find here ample resources for anything from special topic courses to individual talks and special student projects. The literature on π included in this source book falls into three classes: first, a selection of the mathematical literature of four millennia; second, a variety of historical studies or writings on the cultural meaning and significance of the number; and third, a number of treatments on π that are fanciful, satirical, and/or whimsical.
