Parallel Computing Roman Trobec, Marián Vajteršic, Peter Zinterhof, 2009-06-18 The use of parallel programming and architectures is essential for simulating and solving problems in modern computational practice There has been rapid progress in microprocessor architecture interconnection technology and software development which are increasing directly the rapid growth of parallel and distributed computing However in order to make these benefits

usable in practice this development must be accompanied by progress in the design analysis and application aspects of parallel algorithms In particular new approaches from parallel numerics are important for solving complex computational problems on parallel and or distributed systems The contributions to this book are focused on topics most concerned in the trends of today's parallel computing These range from parallel algorithmic programming tools network computing to future parallel computing Particular attention is paid to parallel numerics linear algebra differential equations numerical integration number theory and their applications in computer simulations which together form the kernel of the monograph We expect that the book will be of interest to scientists working on parallel computing doctoral students teachers engineers and mathematicians dealing with numerical applications and computer simulations of natural phenomena

Error Control and Adaptivity in Scientific Computing Haydar Bulgak, Christoph Zenger, 2012-12-06 One of the main ways by which we can understand complex processes is to create computerised numerical simulation models of them Modern simulation tools are not used only by experts however and reliability has therefore become an important issue meaning that it is not sufficient for a simulation package merely to print out some numbers claiming them to be the desired results An estimate of the associated error is also needed The errors may derive from many sources errors in the model errors in discretization rounding errors etc Unfortunately this situation does not obtain for current packages and there is a great deal of room for improvement Only if the error can be estimated is it possible to do something to reduce it The contributions in this book cover many aspects of the subject the main topics being error estimates and error control in numerical linear algebra algorithms closely related to the concept of condition numbers interval arithmetic and adaptivity for continuous models
