This is a very useful book, especially for *Journal of Statistical Software* (*JSS*) readers who wish to learn more about numerical methods and/or scientific applications of Python. Though arguably the book focuses more on numerical analysis than on statistics, it has three solid chapters on the latter, plus abundant infrastructure material useful for statisticians. The author, a physicist by background, has more recently been working in the data science area.

Given the rather lengthy size of the book, the author does not attempt to include a basic Python tutorial. The reader is assumed to have some prior experience with the language. However, such background may be quickly acquired from the numerous tutorials on the web (such as my *Fast Lane to Python*, <http://heather.cs.ucdavis.edu/pyfast.pdf>). The author does recommend the use of development environments, notably **IPython** (now transitioning to **Jupyter**) and **Spyder**, which are introduced briefly in Chapter 1.

Those with just a passing familiarity with Python, though, will find that they must first learn some infrastructure material on numeric Python, specifically the **NumPy** and **SciPy** packages, which are presented clearly in the early chapters. R programmers will find Chapter 2 well within their comfort zone, with lots of similarities.

Some readers may be a bit startled to see that Chapter 3 then covers an unusual topic, symbolic computing, but this reviewer was delighted to see it. Here the **SymPy** package is presented in a fair amount of detail, and even those with no background in symbolic math will find themselves able to manipulate algebraic expressions, including matrix-valued ones, with rather little effort.

Chapter 4, *Plotting and Visualization*, uses **Matplotlib**. My own preference would be for R's extensive – and more statistics-oriented – graphical facilities, but the **Matplotlib** APIs are clean and easy to apply.

Chapters 5–11 are devoted to classical numerical methods, such as the solution of ODEs, but many *JSS* readers will find Chapter 10, *Sparse Matrices and Graphs*, to be of interest. There is a nice section at the end on analysis and display of random graphs.

Numerical Approach To The Location Of Industry:

A Guide to Information Sources in the Geographical Sciences Stephen Goddard, 1983-01-01 Geography is a wide ranging discipline and the number of information sources available is truly enormous These include printed books and journal articles maps satellite photographs archives statistical information and much else One particular problem facing geographers is that when one studies a foreign country information may be available only in the foreign country and difficult to obtain This book discusses the information sources available to geographers *Location of Industries in Madhya Bharat Plateau* Santosh Kumar Shukla, 1979 *Productivity and Performance in the Paper Industry* Gary Bryan Magee, 1997-03-27 This pioneering 1997 study examines the economic development of the British paper industry between 1860 and 1914 an era in which it is often claimed that the origins of Britain's relative economic decline are first witnessed For paper making this was also a period in which an array of important new forces including inter alia the development of new raw materials and the move to ever larger scales of production came on the scene Gary Bryan Magee looks at the effect of these changes and assesses how effectively the industry coped with the new pressures drawing upon an extensive range of quantitative and archival sources from Britain America and other countries Along the way Dr Magee addresses issues central to the understanding of industrial competitiveness such as technological change entrepreneurship productivity trade policy and industrial relations *The Large Industrial Enterprise* H.D. Watts, 2018-01-12 Large industrial enterprises are an important phenomena in advanced Western economies They control large percentages of total industrial assets employ millions of workers and together with their dependent satellite firms produce their own spatial patterns of employment location of production capacity and flow of material and information and thus dominate the economic base of whole towns This study first published in 1980 surveys a massive amount of work on large industrial firms and features an in depth study of the growth of large industrial enterprises in the UK brewing industry from 1951-76 This illustrates many of the themes discussed in the book *The Theory of Industrial Location* James E. Rowe, 1980 **Paper and the British Empire** Timo Särkkä, 2020-12-28 Paper and the British Empire examines the evolution of the paper industry within British organisational frameworks and highlights the role of the Empire as a market and business making area in a world of shrinking commerce and rising trade barriers Drawing on a valuable range of primary sources this book covers the period 1861-1960 and examines events from the establishment of free trade backed by the gold standard to Britain's membership of the European Free Trade Association In the field of the paper industry the speed and intensity of the industrialisation process around the globe have been shaped by a wide variety of variables including the surrounding institutional framework entrepreneurial and organisational strategies the cost and accessibility of transport and the availability of capital knowledge energy resources and technology The supply of papermaking raw materials has also been key and has historically been the most important determinant for geographical location and dominance The research in this work focuses on the roles played by such variants on the one hand and demand

characteristics on the other In particular it considers developments connected to a quest for Empire grown raw materials in order to tackle the problem of the lack of indigenous raw materials and the resulting dependence on Scandinavian wood pulp imports This text is of considerable interest to advanced students and researchers in economic history business history and the paper industry and will also be useful to organisations working within the pulp and paper industries

The Evolution of Global Paper Industry 1800--2050 Juha-Antti Lamberg,Jari Ojala,Mirva Peltoniemi,Timo Särkkä,2012-12-22 This book presents an historical analysis of the global paper industry evolution from a comparative perspective At the centre are 16 producing countries Finland Sweden Norway the USA Germany Canada Japan the UK the Netherlands Italy Spain Portugal Chile Brazil Uruguay and Russia A comparative study of the paper industry evolution can achieve the following important research objectives First we can identify the country specific historical features of paper industry evolution and compare them to the general business trends explicable by existing theoretical knowledge Second we can identify and isolate the factors causing both the rise and fall of industrial populations Third a shared research agenda can produce an intensive analysis of global industry dynamics Finally an extended research period of 250 years can identify what is truly unique in the paper industry evolution and the extent to which it took the same path as other important manufacturing industries
