Numerical Optimisation of Dynamic Systems Laurence Charles Ward Dixon, G. P. Szegö, 1980 Numerical Optimisation of Dynamic Systems Laurence Charles Ward Dixon, G. P. Szegö, 1980 Control and Dynamic Systems V37: Advances in Industrial Systems C.T. Leonides, 2012-12-02 Control and Dynamic Systems Volume 37 Advances in Industrial Systems provides an overview of the state of knowledge in industrial systems This volume contains nine chapters and begins with a paper on the objective measures used to characterize the performance of computers which control critical processes This is followed by separate chapters on the design of automotive power train control systems control techniques in the pulp and paper industry developments production scheduling research and practice a general model based failure detection and diagnosis methodology and the application of model predictive control techniques to problems with several input and output variables Subsequent chapters deal with techniques for dealing with the problem of providing a complete coherent and reliable data base from a collection of switch and breaker status data and measurements systematic approaches to modifying a finite element model and optimization techniques in industrial chemical systems. The contributions in this volume will provide a unique and significant reference source for practicing professionals as well as those involved with advancing the **Introduction to Sensitivity and Stability Analysis in Nonlinear Programming** Fiacco, 1983-11-02 state of the art Introduction to Sensitivity and Stability Analysis in Nonlinear Programming New Quantitative Techniques for Economic Analysis Giorgio P. Control Perspectives on Numerical Algorithms and Matrix Problems Amit Bhaya, Eugenius Kaszkurewicz, 2006-01-01 Control Perspectives on Numerical Algorithms and Matrix Problems organizes the analysis and

design of iterative numerical methods from a control perspective. The authors discuss a variety of applications including iterative methods for linear and nonlinear systems of equations neural networks for linear and quadratic programming problems support vector machines integration and shooting methods for ordinary differential equations matrix preconditioning matrix stability and polynomial zero finding This book opens up a new field of interdisciplinary research that should lead to insights in the areas of both control and numerical analysis and shows that a wide range of applications can be approached from and benefit from a control perspective Optimization of Chemical Plant Simulation Using Double Collocation Iosef Illes, 2004-06-04 Inhaltsangabe Problemstellung Fr die L sung einer breiten Klasse der chemischen Betriebssimulationsmodelle einschlie lich Differentialgleichungen und Optimierung ist eine Methode konstruiert worden Die doppelte orthogonale Kollokation und die Finite Elemente Methode werden angewendet um das Modell in ein NLP Problem zu konvertieren Das NLP Problem wird dann entweder durch den nichtlinearen Optimierungscode VF13AD der auf der sukzessiven quadratischer Programmierung basiert oder durch den nichtlinearen Optimierungscode GRG2 der auf dem generalisierten Gradientenverfahren basiert gel st Dieses Verfahren wird simultane Optimierung und L sungsstrategie genannt Das Zielfunktional kann dabei Integralterme enthalten und die Zustandsvariablen sowie die Entscheidungsvariablen k nnen zeitliche Verz gerung haben Das Modell kann Zustandsvariablen und Entscheidungsvariablen enthaltende Gleichungen algebraische Gleichungen und Ungleichungen enthalten Die H chstzahl der unabh ngigen Ver nderlichen in den partiellen Differentialgleichungen ist zwei Die Probleme die drei unabh ngige Ver nderliche enthalten k nnen mit der Differenzenmethode in zwei unabh ngige Ver nderliche enthaltende Probleme konvertiert werden Die H chstzahl der NLP Variablen sowie die der Nebenbedingungen betr gt 1500 Die Methode ist auch f r das L sen der gew hnlichen und partiellen Differentialgleichungen verwendbar Die Zustandsfunktionen werden durch eine lineare Kombination der Lagrange Interpolationspolynomen approximiert Die Kontrollfunktion kann entweder durch eine lineare Kombination der Lagrange Interpolationspolynomen oder durch eine Funktion die st ckweise konstant ist approximiert werden Der Wert der Funktion und die Zahl der inneren Kollokationspunkte kann je nach dem finiten Element variieren Der residuale Fehler wird an quidistanten Knotenpunkten ausgewertet und erm glicht so die Genauigkeit der L sung zwischen Kollokationspunkten zu berpr fen Die L sungsfunktionen k nnen tabellarisiert werden Es gibt auch die M glichkeit die Kontrollvektor Parametrisierung zu verwenden um die dynamischen Optimierungsprobleme zu l sen wenn das Modell aus Anfangswertaufgaben besteht Diese Methode soll angewendet werden wenn das Modell viele Differentialgleichungen enth lt oder die obere Grenze der Integration gleichzeitig eine zu optimal w hlende Variable ist Das Programm ist von VAX FORTRAN 77 in IBM FORTRAN 77 und SUN SPARC 2000 FORTRAN 77 konvertiert **Dynamics of Data Envelopment Analysis** Jati Sengupta, 2013-11-11 Data envelopment analysis develops a set of nonparametric and semiparametric techniques for measuring economic efficiency among firms and nonprofit organizations. Over the past decade this technique

has found most widespread applications in public sector organizations. However these applications have been mostly static This monograph extends this static framework of efficiency analysis in several new directions. These include but are not limited to the following 1 a dynamic view of the production and cost frontier where capital inputs are treated differently from the current inputs 2 a direct role of the technological progress and regress which is so often stressed in total factor productivity discussion in modem growth theory in economics 3 stochastic efficiency in a dynamic setting where reliability improvement competes with technical efficiency 4 flexible manufacturing systems where flexibility of the production process and the economies of scope play an important role in efficiency analysis and 5 the role of economic factors such as externalities and input interdependences Efficiency is viewed here in the framework of a general systems theory model Such a view is intended to broaden the scope of applications of this promising new technique of data envelopment analysis The monograph stresses the various applied aspects of the dynamic theory so that it can be empirically implemented in different situations As far as possible abstract mathematical treatments are avoided and emphasis placed on the statistical examples and empirical illustrations The 1985 Symposium on Systems Analysis in Forest Resources Society of American Foresters, 1987 Control Applications of Nonlinear Programming and Optimization G. Di Pillo, 2014-05-17 Control Applications of Nonlinear Programming and Optimization presents the proceedings of the Fifth IFAC Workshop held in Capri Italy on June 11 14 1985 The book covers various aspects of the optimization of control systems and of the numerical solution of optimization problems The text also discusses specific applications concerned with the optimization of aircraft trajectories of mineral and metallurgical processes of wind tunnels and of nuclear reactors. The book also considers computer aided design of control systems The book is useful to mathematicians engineers and computer engineers Numerical Techniques for Stochastic Systems Francesco Archetti, Marco Cugiani, 1980 Control Applications of Nonlinear Programming H.
