Parks in Peril Katrina Brandon, Kent Hubbard Redford, Steven E. Sanderson, 1998
Brandon, Kent H. Redford, Steven Sanderson, 1998-07 Using the experience of the Parks in Peril program a wide ranging project instituted by The Nature Conservancy and its partner organizations in Latin America and the Caribbean to foster better park management this book presents a broad analysis of current trends in park management and the implications for biodiversity conservation It examines the context of current park management and challenges many commonly held views from social political and ecological perspectives The book argues that biodiversity conservation is inherently political sustainable use has limitations as a primary tool for biodiversity conservation effective park protection requires understanding the social context at varying scales of analysis actions to protect parks need a level of conceptual rigor that has been absent from recent programs built around slogans and stereotypes Nine case studies highlight the interaction of ecosystems local peoples and policy in park management and describe the context of field based conservation from the perspective of those actually implementing the programs Parks in Peril builds from the case studies and specific park level concerns to a synthesis of findings from the sites The editors draw on the case studies to challenge popular conceptions about parks and describe future directions that can ensure long term biodiversity conservation Throughout contributors argue that protected areas are extremely important for the protection of biodiversity yet such areas cannot be expected to serve as the sole means of biodiversity conservation Requiring them to carry the entire burden of conservation is a recipe for ecological and social disaster

Conservation Monique Borgerhoff Mulder, Peter Coppelillo, 2018-06-05 Nearly 90 percent of the earth's land surface is directly affected by human infrastructure and activities yet less than 5 percent is legally protected for biodiversity conservation and even most large protected areas have people living inside their boundaries In all but a small fraction of the earth's land area then conservation and people must coexist Conservation is a resource for all those who aim to reconcile biodiversity with human livelihoods It traces the historical roots of modern conservation thought and practice and explores current perspectives from evolutionary and community ecology conservation biology anthropology political ecology economics and policy The authors examine a suite of conservation strategies and perspectives from around the world highlighting the most innovative and promising avenues for future efforts Exploring highlighting and bridging gaps between the social and natural sciences as applied in the practice of conservation this book provides a broad practically oriented view It is essential reading for anyone involved in the conservation process from academic conservation biology to the management of protected areas rural livelihood development to poverty alleviation and from community based natural resource management to national and global policymaking
