CVD risk and mortality especially in patients characterized with residual inflammation This effect was independent of lipid level lowering In late 2019 the inflammation hypothesis of atherosclerosis was confirmed in the Colchicine Cardiovascular Outcomes Trial COLCOT using the anti inflammatory agent colchicine in patients with recent myocardial infarction A follow up study in 2020 applying colchicine in a randomized trial involving patients with chronic coronary disease LoDoCo also showed significant risk reduction These landmark studies set the stage for identifying drug targets that block atherosclerosis specific inflammatory pathways as a highly promising strategy to reduce cardiovascular risk
