of invention and inventor that mixes science and politics intrigue and scandal revolution and shopping Howard Wainer validates Thoreau's observation that circumstantial evidence can be quite convincing as when you find a trout in the milk The story really begins with the eighteenth century origins of the art logic and methods of data display which emerged full grown in William Playfair's landmark 1786 trade atlas of England and Wales The remarkable Scot singlehandedly popularized the atheoretical plotting of data to reveal suggestive patterns an achievement that foretold the graphic explosion of the nineteenth century with atlases published across the observational sciences as the language of science moved from words to pictures Next come succinct chapters illustrating the uses and abuses of this marvelous invention more recently from a murder trial in Connecticut to the Vietnam War's effect on college admissions Finally Wainer examines the great twentieth century polymath John Wilder Tukey's vision of future graphic displays and the resultant methods methods poised to help us make sense of the torrent of data in our information laden world
