**Care and Respect in Bioethics** Darlei Dall'Agnol, 2016-09-23 This book discusses the philosophical foundations of bioethics with a particular focus on the tensions and potential dilemmas generated by the intuitionist meta ethical commitments of the predominant normative theory namely the four principles approach This view is based on the prima facie norms of respect for autonomy one ought to respect the autonomous choices of subjects of scientific research patients non maleficence one ought to refrain from inflicting harm beneficence one ought to do good and prevent or remove harm and justice one ought to treat people fairly The tensions in applying these basic principles may lead to inaction in scientific experiments involving human subjects or to arbitrary applications of the norms in the art of caring The problem can be made explicit in these terms on the one hand caring without respecting seems blind degenerating into forms of paternalism when for instance the carer imposes her conception of the good life or a particular procedure on the cared for on the other hand respecting without caring amounts to indifference or individualism when for example a person does not look after a vulnerable being properly The initial hypothesis of this book then is that the concept of respectful care can be built up working from an ethico philosophical perspective to be a leading notion capable of guiding our daily actions and bioethical practices

Shenkin,2012-12-06 The subject of medical ethics is always current and offers an inviting theme particularly for anyone who has spent his life in medical practice But the subject of ethics is impossible to deal with unless one first asks its purposes Therefore this book is divided into two parts the first comprehends theoretical

considerations and the second pragmatic and empirical data on and discussions of current problems Part One will be of greater interest to moral philosophers philosophers and historians of science and social scientists Part Two should have greater appeal to physicians medical students and medical planners Nevertheless it is hoped that the latter will look into Part One for the justification of the conclusions the author could reach on the material presented in Part Two Likewise it will become obvious why it is believed the solutions of many if not most ethical dilemmas are not always discernible at a given moment in time Also those who are more concerned with the theoretical material of Part One might find its application to current real life problems interesting It should not be too much to hope that the entire book will appeal to many general readers The bio ethical problems presented are of frequent and growing personal concern and are discussed almost daily in the news media
