Loss Of Biodiversity:

Loss of Biodiversity David M. Barker, 2011 This title examines one of the world's critical issues human trafficking. Readers will learn the historical background of this issue leading up to its current and future impact on society. Various forms of modern slavery including debt bondage, child labor, prostitutes, sex slaves, and child soldiers are discussed in detail, as well as risk factors for trafficking such as poverty, violence, and cultural, traditional, or religious views. Also covered are the physical, psychological, and spiritual impact trafficking survivors experience, laws intended to combat human trafficking, the tier system, and organizations such as the United Nations and UNICEF. Engaging text, informative sidebars, and color photographs present information realistically, leaving readers with a thorough, honest interpretation of human trafficking. Features include a timeline, facts, additional resources, Web sites, a glossary, a bibliography, and an index. *Essential Issues* is a series in the *Essential Library*, an imprint of ABDO Publishing Company.

Loss of Biodiversity Sharon L. Spray, Karen Leah McGlothlin, 2003 *Loss of Biodiversity* introduces readers to the important concepts for understanding the environmental challenges and consequences of the declining diversity of life on the planet. Contributions from scientists and academics in the social sciences and humanities provide readers with an initial tool kit for understanding the concepts central to their disciplinary perspective and the multi-dimensional aspects of the loss of biodiversity. *Loss of Biodiversity* Rachael Hames, 2017-12-15 Biodiversity is the foundation for maintaining the balance between all living things. When species begin dying out, it upsets this delicate balance and can cause ecological tragedies. Earth's rainforests are homes to vast biodiversity. However, the rainforests are also one of Earth's most threatened habitats. There, animals risk losing their homes through pollution and deforestation. The information presented in this book highlights at-risk animal and plant species and discusses ways readers can lessen their carbon footprint. Colorful photographs of animals and habitats transport readers to distant locations where biodiversity takes center stage.

Biodiversity Loss Charles Perrings, 1997-01-28 This volume reports key findings of the Biodiversity Program of the Royal Swedish Academy of Sciences, Beijer Institute. The program brought together a number of eminent ecologists and economists to consider the nature and significance of the biodiversity problem. In encouraging collaborative work between these closely related disciplines, it sought to shed new light on the concept of diversity, the implications of biological diversity for the functioning of ecosystems, the driving forces behind biodiversity loss, and the options for promoting biodiversity conservation. The results of the program are surprising. It is shown that the core of the biodiversity problem is a loss of ecosystem resilience and the insurance it provides against the uncertain environmental effects of economic and population growth. This is as much a local as a global problem, implying that biodiversity conservation offers benefits that are as much local as global. The solutions, as well as the causes of biodiversity loss, lie in incentives to local users.

Biodiversity Offsets Wolfgang Wende, Graham - M. Tucker, Fabien Quétier, Matt Rayment, Marianne Darbi, 2018-03-07 This book deals with the new concept of biodiversity offsets. The aim of offsetting schemes is to achieve no

let loss or even net gain of biodiversity Offsets obey a mitigation hierarchy and reflect the precautionary and polluter pays principle in regard to project impacts Readers gain insights into current debates on biodiversity policies with top experts outlining theoretical principles and the latest research findings At the same time the focus is on practical application and case studies Today there is a lively international discussion among practitioners and scientists on the optimal legal framework metrics and design of habitat banks to ensure the success of biodiversity offsets and to minimise the risks of failure or misuse Contributing to the debate this volume presents the activities and practices of biodiversity offsetting already implemented in Europe in selected EU member states and the lessons that can be learnt from them Readers may be surprised at how much experience already exists in these countries A further aim of the book is to offer grounded insights on the road ahead and foster a more intensive and fruitful discussion on how offsetting can be extended and improved upon so that it becomes a key and effective component of Europe s biodiversity conservation policy framework

The Ecological and Societal Consequences of Biodiversity Loss Michel Loreau, Andy Hector, Forest Isbell, 2022-03-15 The idea that changes in biodiversity can impact how ecosystems function has over the last quarter century gone from being a controversial notion to an accepted part of science and policy As the field matures it is high time to review progress explore the links between this new research area and fundamental ecological concepts and look ahead to the implementation of this knowledge This book is designed to both provide an up to date overview of research in the area and to serve as a useful textbook for those studying the relationship between biodiversity and the functioning stability and services of ecosystems The Ecological and Societal Consequences of Biodiversity Loss is aimed at a wide audience of upper undergraduate students postgraduate students and academic and research staff

Progress Towards Halting the Loss of Biodiversity by 2010 European Environment Agency, 2006 The continuing loss of biological diversity and its components genes species and ecosystems is an issue of global concern Research has shown that both the diversity and the identity of the various species have a fundamental influence on the magnitude and stability of the ecological processes that occur at the ecosystem level There are significant interrelationships between the degradation of ecosystems the loss of animal and plant species market globalisation and poverty Europe's high per capita consumption and waste production means that its impact on ecosystems is felt well beyond its own borders Biodiversity loss is inextricably linked to the degradation of the ecosystem services described by the 2005 Millennium Ecosystem Assessment

The Root Causes of Biodiversity Loss Alexander Wood, Pamela Stedman-Edwards, Johanna Mang, 2013-11-05 The world is losing species and biodiversity at an unprecedented rate The causes go deep and the losses are driven by a complex array of social economic

political and biological factors at different levels Immediate causes such as over harvesting pollution and habitat change have been well studied but the socioeconomic factors driving people to degrade their environment are less well understood This book examines the underlying causes It provides analyses of a range of case studies from Brazil Cameroon China Danube River Basin India Mexico Pakistan Philippines Tanzania and Vietnam and integrates them into a new and interdisciplinary framework for understanding what is happening From these results the editors are able to derive policy conclusions and recommendations for operational and institutional approaches to address the root causes and reverse the current trends It makes a contribution to the understanding of all those from ecologists and conservationists to economists and policy makers working on one of the major challenges we face [Biodiversity and Ecosystem Insecurity](#) Ahmed Djoghla, Felix
