Molecular Neurotoxicology Nasser H. Zawia, 2004-04-27 Molecular Neurotoxicology Environmental Agents and Transcription Transduction Coupling deals with changes in gene expression following exposure to neurotoxicants as well as deciphering signal transduction or transcription coupling that is altered by the same exposure Until now little has been published on the topic in one reference and toxicol **Neurotoxicology** Jean Harry G, Hugh A. Tilson, 1999-07-22 This second edition of Neurotoxicology is valuable for scientists in government and industry who are responsible for public health and for the safe and efficient use of chemicals This integrated approach to neurotoxicology will aid in the understanding of the sites and mechanisms of neurotoxicity stimulate the formulation of testable hypotheses about how chemicals affect the nervous system and help improve the risk assessment process This edition focuses primarily on the neurobiological basis underlying neurotoxic sites and modes of action The contents include molecular biological and in vitro approaches potential cellular and molecular sites involving neuron glia interactions axonal transport ion channels metabolic influences on neurotoxicity role of free radical formation in neurotoxicity interaction between chemicals and trophic factors endocrine disruptors apoptosis in neurotoxicity in vivo brain imaging advances in measuring cognitive function advances in developing quantitative models for neurotoxicology risk assessment **Molecular Neurotoxicology** Nasser H. Neurotoxicology G. Jean Harry, Hugh A. Tilson, 2016-04-19 This new edition presents an integrated approach to neurotoxicology the study of organisms responses to changes in their environment and how interruption of the flow of information by chemical exposure causes a wide range of effects from learning deficits sensory disturbances in the extremities and muscle weakness to seizures and signs simila In vivo Models for Drug Discovery José Miguel Vela, Rafael Maldonado, Michel Hamon, 2014-08-11 This one stop reference is the first to present the complete picture covering all relevant organisms from single cells to mammals as well as all major disease areas including neurological disorders cancer and infectious diseases Addressing the needs of the pharmaceutical industry this unique handbook adopts a broad perspective on the use of animals in the early part of the drug development process including regulatory rules and limitations as well as numerous examples from real life drug development projects After a general introduction to the topic the expert contributors from research driven pharmaceutical companies discuss the basic considerations of using animal models including ethical issues The main part of the book systematically surveys the most important disease areas for current drug development from cardiovascular to endocrine disorders and from infectious to neurological diseases For each area the availability of animal models for target validation hit finding and lead profiling is reviewed backed by numerous examples of
