Friedemann Schrenk, Stephanie Müller, 2005 **The Climate of Past Interglacials** F. Sirocko, M. Claussen, T. Litt, M.F. Sanchez-Goni, 2006-12-08 Historically climate fluctuations such as the Little Ice Age show that interglacial climate change is not entirely stable but responds to even subtle changes in radiative forcing Through research it has been made clear that even an abrupt change of climate within years is not just a theoretical possibility but has in fact happened in the prehistoric past It is therefore clear that in principle it could happen again Human civilization has exploded under the mild and relatively stable climatic conditions that have prevailed over the last 11 000 years This book focuses on revisiting the past and to study climate and environment in a suite of experiments where boundary conditions are similar but not identical to today so we can learn about the climate environment system its sensitivity thresholds and feedback The palaeoclimate community holds an important key to scientific information on climate change that provides a basis for appropriate adaptation and mitigation strategies The authors of this book have taken up this challenge and summarize their results in this special volume It presents state of the art science on new reconstructions from all spheres of the Earth System and on their synthesis on methodological advances and on the current ability of numerical models to simulate low and high frequency changes of climate environment and chemical cycling related to interglacials Summarizes important information on climate change providing a basis for appropriate adaptation and mitigation strategies for human civilization Reports on new reconstructions on methodological advances numerical models simulating low and high frequency changes and chemical cycling related to interglacials Incorporates palaeovegetation and numerical modeling of climate and environmental and geochemical parameters to address regional feedback to global change with successful data models **Wild Things 2.0** James Walker, David Clinnick, Helen Drinkall, Stephanie Piper, 2019-10-10 Building on the first Wild Things volume Oxbow Books 2014 which aimed to showcase the research putting archaeologists researching the Palaeolithic and Mesolithic at the cutting edge of understanding humanity's past this collection of contributions presents recent research from an international group of both early career and established scientists Covering aspects of both Palaeolithic and Mesolithic research in order

to encourage dialogue between practitioners of archaeology of both periods contributions are also geographically diverse touching on British European North American and Asian archaeology Topics covered include transitional periods deer and people stone tool technologies pottery land use antler frontlets and the development of prehistoric archaeology an age of wonder
