

Habitable Worlds?

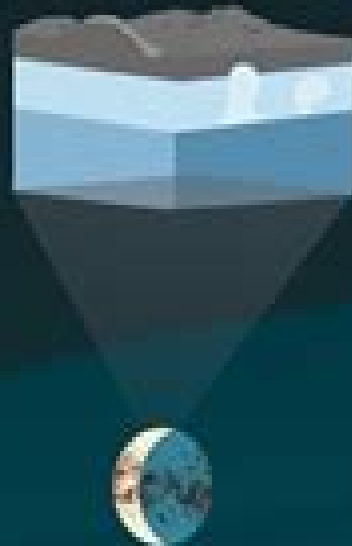

Increasing knowledge of other worlds in our solar system helps drive the search for life beyond Earth – so far, the only living world we know of.

Mars

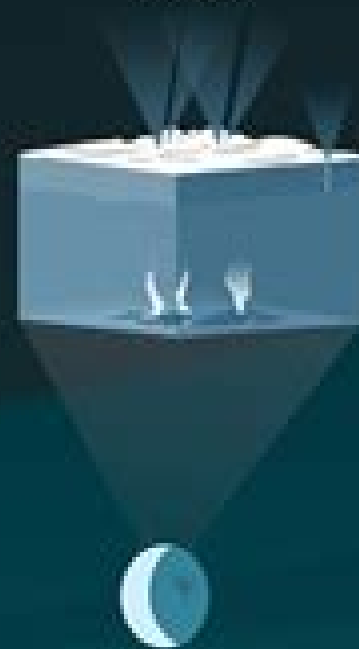

Mars' surface – frozen and bombarded by radiation – is likely inhospitable to life, but subsurface ice or even water could provide a home for microorganisms.

Europa

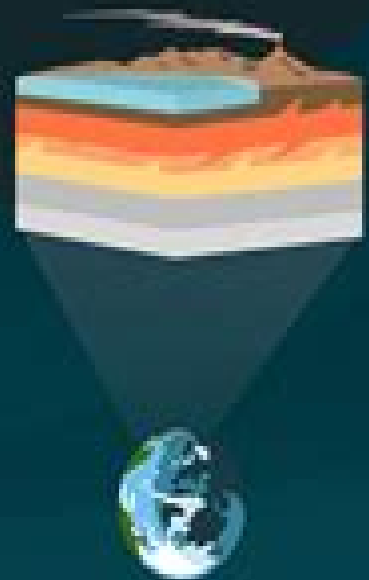

A vast interior ocean lies beneath the surface of this moon of Jupiter, encased in a shell of ice. The ocean water itself, and even upper ice layers, could be potentially habitable.

Enceladus

Jets erupting from this Saturn moon suggest active hydrothermal vents on the floor of its subsurface ocean – dynamics similar to Earth's when life originated billions of years ago.

Earth

Our planet's so-far-unique combination – plate tectonics and abundant water – are considered key factors to sustain life.

New Worlds In Astroparticle Physics - Proceedings Of The Second International Workshop Ana Maria Mourao, Mario Pimenta, Paulo M Sa, 1999-09-17 The second meeting on New Worlds in Astroparticle Physics reflected the growing interest and enthusiasm in the joint field of particle physics and astrophysics The recent results of Superkamiokande on the possible neutrino oscillations are reviewed both from the experimental and theoretical points of view The determination of the mass density in the Universe covered a wide range of topics from the Large Scale Structures to the Supernovae Cosmology project Each main subject was introduced by a comprehensive review The study of the origin and composition of cosmic rays is inspiring a new generation of earth and space based experiments *Newly Discovered Planets* Corona Brezina, 2015-12-15 Researching exoplanets is a thrilling new frontier in science There are periodically fresh stories in the media about exoplanets and the possibility of life existing outside Earth's solar system Readers learn about scientists' speculations on faraway alien life Profiles of fascinating exoplanets are examined as are the technical matters of how scientists use spectra to obtain data about stars and planets The habitable zone of a planet what extreme life has been discovered and what life forms might exist on some moons are studied as well as the Kepler Mission launched in 2009 to search for Earth-like planets

New Worlds In Astroparticle Physics - Proceedings Of The International Workshop Ana Maria Mourao, Mario Pimenta, Robertus Potting, Peter Sonderegger, 1998-05-14 The proceedings of the first meeting on New Worlds in Astroparticle Physics focus on the joint field of particle physics and astrophysics This is a field widely open to both theory and experiment Important questions of particle physics from the role of the Higgs scalar to the deconfined QCD phase the developments beyond the Standard Model and the subtle behavior of neutrinos are discussed The same is true for the relevant questions in astrophysics and cosmology from the fluctuations in the photon background radiation to large scale structure formation dark matter searches and the origin of cosmic rays at very high energies The two viewpoints from the small sizes or from the large scales are convergent and reveal the same universe the universe of astroparticle physics

[The Planet-Girded Suns: Our Forebears' Firm Belief in Inhabited Exoplanets](#) Sylvia Engdahl, 2012-06-01 Interest in exoplanets the worlds of other stars is not new From the late 17th century until the end of the 19th almost all educated people believed that the stars are suns surrounded by inhabited planets a belief that was expressed not in science fiction but in serious speculation both scientific and religious as well as in poetry Only during the first half of the 20th century was it thought that life bearing exoplanets are rare This is not a science book rather it belongs to the category known as History of Ideas First published by Atheneum in 1974 it tells the story of the rise fall and eventual renewal of widespread conviction that we are not alone in the universe In this 2012 updated edition the chapters dealing with modern speculation have been revised to reflect the progress science has made during the past 40 years including the actual detection of planets orbiting other stars However it is not intended to be more than a brief introduction to today's views its focus is on little known facts about those of the past Why should we care what our forebears believed Now the question of ET life is a matter for investigation by science Yet it's significant that most educated people of past centuries were convinced that other inhabited worlds exist without any scientific evidence whatsoever This historical fact reveals that human beings have an instinctive sense of kinship with the wider universe and a desire to see the realms that lie beyond this one small planet and perhaps eventually to go there Our ancestors conceived of such voyages only in a spiritual sense as occurring after death But we who have taken our first small steps into space are aware that our descendants may set foot on the worlds of other suns Just as in the 17th century people were initially upset by the new knowledge that the stars are suns scattered in space rather than lights fixed to a nearby sphere the growing awareness that Earth is not safely isolated from whatever lies beyond makes many of our contemporaries uneasy Thus today's predominant feelings about spaceships are ambivalent Nevertheless if an impulse toward belief that we are not alone in the universe is indeed an innate characteristic of human beings as the past spread of belief in inhabited exoplanets suggests we can be sure that those who follow us will not turn back from becoming spacefarers
