Optical Document Security:

Optical Document Security Rudolf L. Van Renesse, 1998 This edition on optical document security has been revised and updated to include three new chapters on security design of valuable documents and products smart card security and biometrics The book should be of interest to engineers and both technical and non technical managers using secure documents or manufacturing security devices

Optical Document Security: Measurement, Characterization and Visualization Mikael Lindstrand, 2019-04-12 Documents of high value such as passports tickets and banknotes facilitate means for authentication Authentication processes aim at mitigating counterfeit passable products The arsenal of security features in the business is abundant but an effective and reliable counterfeit mitigating system need an architectural approach rather than either relying on one feature only or vaguely motivated aggregated security features Optically variable device OVD is a concept in the industry including costefficient and unique authentication functionality OVD based features may serve as the main counterfeit mitigating functionality as in banknotes For higher value documents such as passports security architectural design may include multimodal combined features in which OVD is one characterizing and necessary aspect Thereby a successful counterfeit need not only to simulate hack electronic based security features such as radio frequency based identifier combined with public key infrastructure based cryptography PKI but also simulate OVD functionality Combined feature authentication based e g on PKI and OVD that relies on principally different physics and hence technology competences is of especial interest Well architected and implemented such multimodal counterfeit mitigating systems are effective to the degree that producing passable products requiring more resources than potentially illegitimately gained by the counterfeiter Irrespective of level of ambition and efforts spent on counterfeit mitigation OVD remains critically important as a security concept One feature of OVD is the possibility to include a human inspector in the authentication procedure Including such man in the loop reduces the risk of successful and unnoticed simulations of algorithms such as PKI One challenge of OVD is a lack of standards or even measurements characterizing the significant aspects influencing a human based inspection This thesis introduces a system able to measure characterize and visualize the significant aspects influencing a human based inspection of OVD features The contribution includes the development of a multidimensional and high dynamic range HDR color measurement system of spatial and angular resolution The capturing of HDR images is particularly demanding for certain high contrast OVD features and require innovative algorithms to achieve the necessary high contrast sensitivity function of the imaging sensor Representing the significant aspects influencing a human based inspection of OVD requires a considerable amount of data The development of an appropriate information protocol is therefore of importance to facilitate further analysis data processing and visualization The information protocol transforming the measurement data into characterizing information is a second significant achievement of the presented work in this thesis To prove the applicability measurements visualizations and statistically based analyses have been

developed for a selection of previously unsolved problems as defined by senior scientists and representatives of central banks

Characterization and measurements of the degree to which OVD deteriorate with circulation is one such problem One particular benefit of the implemented suggested solution is the characterization and measurement aim at aspects influencing human based first line inspection The principally difference in the problems treated indicates the generality of the system which is a third significant project achievement The system developed achieves the accuracy and precision including a resolution dynamic range and contrast sensitivity function required for a technology independent standard protocol of optical document security OVDs These abilities facilitate the definition and verification of program of requirements for the development of new security documents Adding also the capability of interlinking first second and third line inspection based characterizations may prove a particular valuable combination which is a fourth significant project achievement The information content Entropy of characterized OVDs and OVD production limitations in combination opens for OVD based novel applications of physically unclonable functions PUF This is of significance as it would generalize the established OVDs to facilitate multimodal verification including PUF verification The OVDs would thereby transform into a combined PUF first line inspection facilitating security feature

Three-Dimensional Television, Video, and Display Technologies Bahram Javidi, Fumio Okano, 2002-08-15 The first monograph on this rapidly evolving area of research and development this book presents both the theory and applications of new advances in 3D TV and display techniques. The theoretical concepts are illustrated by applied examples, numerical simulations and experimental results.

Networked RFID Systems and Lightweight Cryptography Peter H. Cole, Damith C. Ranasinghe, 2007-11-08 This book consists of a collection of works on utilizing the automatic identification technology provided by Radio Frequency Identification (RFID) to address the problems of global counterfeiting of goods. The book presents current research directed to securing supply chains against the efforts of counterfeit operators carried out at the Auto ID Labs around the globe. It assumes very little knowledge on the part of the reader on Networked RFID systems as the material provided in the introduction familiarizes the reader with concepts underlying principles and vulnerabilities of modern RFID systems.

Developing Ambient Intelligence Antonio Mañá, Volkmar Lotz, 2007-06-25 As Ambient Intelligence (AmI) ecosystems are rapidly becoming a reality they raise new research challenges. Unlike predefined static architectures as we know them today, AmI ecosystems are bound to contain a large number of heterogeneous computing communication infrastructures and devices that will be dynamically assembled. Architectures will be sensitive, adaptive, context aware and responsive to users' needs and habits. Researchers need to both enable their user friendly application in a growing number of areas while ensuring that these applications remain reliable and secure.

Held in Sophia Antipolis, France from September the 20th to September the 22nd, 2006, the first edition of the AmI d conference tackled the latest research challenges within AmI ecosystems, presented AmI applications as well as security solutions. The AmI d conference featured an international programme committee co chaired by Professor Antonio Mañá, University of Málaga and Dr Volkmar Lotz, SAP Professor. Javier Lopez, University of Málaga served as General Chair and Mr Richard Bricaire, Strategies Telecoms and Multimedia was the Organization Chair. This volume gathers all the papers selected by the Program Committee. Authors coming from renowned universities and industry research centres contributed to draw a comprehensive state of the art in AmI applications and security research. Among others the reader will find in depth analysis of the following topics: AmI in smart homes, Distributed coordination, Resource optimization, Security Software engineering techniques applied to AmI, Design of context aware ambient services, Context aware Trust. Besides the research track the AmI d conference encompassed an open track whose proceedings are available for download on the web www.amidconference.org.
